

Afforestation Management Plan

Forest/Block Name: Deloraine

Plan details.

Plan Date: 31/03/2025
Planned start date: 19/05/2025
Planned end date: 31/10/2025
Plan prepared by: Scott McCammon
Contact person: Alex Chamberlain

Block Locations

Regional Council: ORC
District Council: CDC
Access Road/Nearest Road: Lochindorb Runs Road
Hazeldale Road

Property details

Land Owner: Roy Trustee 2022 Limited
Forest Owner (If different):
Block General Location: CDC
Address: 376 Lochindorb Runs Road
Legal Description: LOT 2 DP 18087 BLK VI SEC 30
BLK VIII WAREPA SD
Property OT: OT14B/378, OT9A/627
Address: 29 Hazeldale Road
Legal Description: Section 1, 4, 5 SO 24500, Section 6, 7, 8 Block IX Kuriwao
SD,
Property OT: OT18B/863, OT18B/866, T18B/778,

Consultant/Principal Contractor

Consultant Company Name: Venture Forestry Limited
Consultant individual name:
Phone Number:
Postal Address: 176 Puddle Alley Road, Mosgiel 9011
Email Address: admin@ventureforestry.co.nz

Activity

Afforestation to be undertaken manually using people and spades. Planting will be continuous contoured lines wherever possible. A mechanical planter may be used on the lower rolling country for afforestation

Block/s sizes (as per supplied map)

Block: 25/1
Species: Pinus Radiata
Area(ha): 657.8

Block: 25/2
Species: Pinus Radiata
Area(ha): 1380.7

Map Contents

Computer freehold register, date, north arrow:	Yes
Property boundaries within 200m:	Yes
Afforestation/Replanting area boundary	Yes
Species to be afforested or replanted:	Yes
Year Afforestation/Replanting is to occur	Yes
The segmentation boundaries within afforestation or replanting areas required by the wilding tree risk guidelines to calculate a wilding tree risk calculator score:	Yes
Contour lines at less than or equal to 20m intervals:	Yes
Erosion susceptibility classification (map overlay):	Yes
Location of significant natural areas and vegetation clearance:	Yes
Features to be protected during operation (Archaeological areas etc):	No
Any water body or the coastal marine area, including—	Yes
(i) wetlands larger than 0.25 ha and lakes larger than 0.25 ha; and	
(ii) rivers to their perennial extent; and	

- (iii) rivers where the bankfull channel width is 3 m or more; and
- (iv) any outstanding freshwater body or water body subject to a water conservation order; and
- (v) any setbacks from any identified water body or the coastal marine area:

Registered drinking water supply and any drinking water sources for more than 25 people within 1 km downstream of the commercial forestry activity: **No**

Existing roads, tracks, river crossings: **Yes**

Significant Natural Areas (SNA):

SNA's present within or adjacent to the Afforestation/~~Replanting~~ area/s? **Yes**
If yes describe,

Regionally Significant Wetland (RSW) are present near the boundaries as shown on attached maps in several locations.

Is there any Indigenous vegetation present? **Yes**
If yes describe,

- How SNA/indigenous vegetation going to be protected? (include description of setbacks etc.)
 - **Minimum 10m setbacks from RSW areas.**
 - **Areas of significant indigenous vegetation have been mapped out during the planning process (see provided maps) and will have a 5m setback.**
 - **Smaller areas of indigenous vegetation will be accessed during the planting operation and given a 5m setback**
- Operational restrictions, including restrictions on afforestation or replanting, earthworks operations, or harvesting, as applicable, that will be used to ensure that no commercial forestry activity occurs within the significant natural area.
 - **Venture Forestry (VFL) supervisors will be onsite ensuring that contractors adhere to all setbacks**

WATER QUALITY & SEDIMENT

River present in Afforestation/replanting Area? **Yes**

Bank Full Width? **Less than 3m**

Description of waterway/wetland (tributary of?):

24/1 - Tributary of Waiwera River in afforestation area.

24/2 – Tributary of both Kaihiku Stream and Puerua River

Wetland present in block? Yes

If yes, describe (size & nature):

- Three stones Fen Complex RSW
- Hazeldale Fens

Fish spawning indicated in block during the Planting/replanting: Yes

If yes, Indicated spawning species:

Fish spawning indicated in block during the Planting/replanting: Yes

If yes, Indicated spawning species:

1. Nevis galaxias
2. Brown Trout
3. Gollum Galaxias
4. Clutha flathead galaxias
5. Galaxias Pomahaka

Spawning date range:

1. 1 October – 15 December
2. 15 May to 15 September
3. 1 August – 30 August
4. 1 August – 15 November
5. 1 August – 15 November

Indigenous species of funa:

Are threatened or at-risk species of indigenous fauna present? Yes

If yes, describe how these areas will be protected:

As above under fish spawning, these Galaxias are at risk or threatened. Setbacks around waterways will be monitored by VFL staff to ensure that the habitat will be protected

How has the land been prepared for afforestation/replanting?

Vegetation Burnt: NA

Mechanical land preparation: Yes

Intensive grazing: Yes

Sprayed: Yes

Other (describe): NA

Risk of sediment and or slash being mobilised (site specific):

Mechanical land preparations has been undertaken by the landowner prior to VFL starting the afforestation.

Proposed heavy rainfall contingency and response:

After the afforestation occurs, Venture Forestry will carry out 2 other site visits. This is for release spraying and survival surveys. Other than the two visits outlined above, the land

owner is responsible for the site. If requested by the landowner, Venture Forestry will carry out further site visits.

Specific triggers or thresholds for action:

If alerted by landowner, or an issue observed when on site as described above.

Description including maintenance, post work monitoring and corrective actions:

With the soil type, topography combined with the setbacks from mechanical land preparation, it is not expected that any maintenance or corrective measures will be required. If there are areas that require maintenance or corrective actions, this will be done as soon as practical after discovering, or being alerted to, the potential risk.

Description of monitoring erosion and sediment effects of afforestation/replanting:

A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. If there are any issues, or potential issues, then these will be addressed as soon as practical after observing or being made aware. Any areas observed to be high risk at the time of afforestation will receive additional visits during and/or after rain

Set Backs

5m minimum setbacks from all perennial waterways and wetlands, these include areas with aquatic vegetation that do not show on maps supplied to contractors

10m setbacks from legal property boundaries, except where adjacent to forested area.

50m setback from Arch sites

NES CF setbacks have been calculated by Venture staff on site and using aerial imagery. Setbacks will be managed on site during replanting by the silviculture contractor, these will also be audited by Venture Forestry staff carrying out quality control checks.

Wilding Trees

Wilding risk calculator score and calculation sheet provided to council? Yes

Description of how wilding risk was calculated:

Wilding risk assessments were made with observations during site visits at harvesting and post-harvest inspections. There has also been consultation with the landowner regarding predominant wind direction and grazing in and around these areas.

Description of:

- Any adjacent properties under the same ownership.
 - Refer to supplied map.
- Schedule for undertaking wilding inspections.

A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. If there are wilding trees

observed at these visits they will be addressed as soon as practical after observing or being made aware of by the owner.

- How wildings will be removed.
If wilding trees are required to be removed, this will be carried out by hand pulling, or cutting off and ground level and applying poison directly to the stumps.

Indigenous Birds

Procedures for Indigenous birds nesting in block:

Crew to stop work and alert Venture Forestry upon discovery of any indigenous birds nesting within block. Consultation with Parker Conservation as to the best course of action to cause least disturbance to the nesting birds. Harvest in the effected are will not continue until cleared by Parker Conservation or a suitably qualified person deems it no risk to do so.

Nesting is unlikely during the planting season as it is in the winter months.

No indigenous birds sighted at site visits prior to operation.
