Person and Property Details

Plan Date	21 st March 2025
Landowner	Roy Trustee 2022 Limited
Forest Owner	Roy Trustee 2022 Limited
Agent Details	Sequest Solutions Limited t/a Forest360 130 Main Rd, Waikouaiti 0800 366 700
F360 Manager	Adam Humphreys 0272562570
Contact Details for Service	Same as agent
Region and District Area	Clutha
Forest Access Road	Soper Road
Forest Name	Karens
Afforestation Area (ha)	183ha
Afforestation species	<i>Pinus radiata</i> and <i>Leptospermum scoparium</i>
Start Date	01/06/2025
Finish Date	30/10/2025
Location NZTM	4877041.2,1343171.3
Legal Description / title number	OT119/86

Erosion Susceptibility Classification Map

3. Activity

Forestry Activity being Undertaken	Afforestation
Regional Council	Otago
District Council	Clutha
Activity start	1/06/2025
Activity completion	30/10/2025

4. Management Requirements

4.1 Significant Natural Areas (SNA)

Significant Natural Areas (SNA)	Identified Onsite (Y/N)
Any Significant Natural Areas	No
Are these on map	N/A

4.1(a) Describe how SNAs will be avoided by forestry activities:

N/A

4.1(b) Describe any operational restrictions on earthworks or harvesting to ensure that no activities occur within the SNA:

N/A

4.2 Water Quality and Sediment

4.2(a) For sites with waterbodies, identify the risks from the mobilisation of material ie woody debris, slash, sediment on the following if downstream:

Risk	(Y/N)
Any risk to public roads / infrastructure	No
Any risk to properties	No
Any risk to other rivers, lakes, estuary or sea	No
Any registered drinking water supply	No

If yes to any of the above, please describe the risks below:

There are no waterbodies on site that could affect the infrastructure listed above,

4.2(b) Heavy rainfall contingency & response measures – If applicable list any thresholds for action and any maintenance, post event monitoring & any remedial measures:

N/A, activity is not disturbing erosion prone soil, and underlying geology is very stable.

4.3 Erosion and Sedimentation

4.3(a) Describe the erosion and sedimentation effects of this afforestation.

N/A, activity is not disturbing erosion prone soil, and underlying geology is very stable. All releasing to be done to the standards set out in the NES-CF.

4.3(b)(i) Describe the measures to monitor erosion and sedimentation effects of this afforestation / reforestation:

N/A

4.3(b)(ii) What records will be maintained in relation to erosion and sedimentation.

N/A

4.4 Wilding Tree Risk

DSS 1. CALCULATING WILDING SPREAD RISK FROM NEW PLANTINGS

1. SPECIES – GROWTH *(score for one species only)*

Spreading vigour varies with species

- Redwoods, Leyland cypresses, cedars and spruces (very low risk – no need to proceed further) 0
- Radiata (*P. radiata*) and ponderosa (*P. ponderosa*) pine, Lawsons cypress (*C. lawsoniana*) 1
- Muricata (*P. muricata*) and maritime (*P. pinaster*) pine and larches (*Larix* spp) 2
- Corsican (*P. nigra*) and mountain/dwarf mountain (*P. uncinata/mugo*) pine 3
- Douglas-fir ^g (*Ps. menziesii*), Scots pine (*P. sylvestris*) 4 ^g
- Lodgepole/contorta pine (*P. contorta*) 5

1

➤ Score

Enter score (0, 1, 2, 3, 4 or 5) here

2. SPECIES – PALATABILITY

Palatability varies with species

- Radiata, maritime and ponderosa pine 1
- Lodgepole and muricata pine and European larch 2
- Scots and mountain/dwarf mountain pine and Douglas-fir 3
- Corsican pine 4

1

Score

Enter score (0, 1, 2, 3 or 4) here

3. SITING OF NEW PLANTING ^{c, d}

Trees are located on

- Sites well sheltered from prevalent and strong winds 0
- Flat sites (<10°), partially exposed to strong/prevalent winds 1
- Lea slopes where strong eddy gusts are likely 2
- Flat sites (<10°), fully exposed to strong/prevalent winds 3
- *Either* elevated 'take-off' sites, (ridge-tops, or base of exposed slopes >10°) *or* 4
- sloping land, fully exposed to strong/prevalent winds *Enter score (0, 1, 2, 3 or 4)*

1

Score

4. DOWNWIND LANDUSE – GRAZING

Wilding establishment influenced by grazing (particularly with sheep)

- Intensive grazing on developed pasture
- Regular mob stocking with sheep ^e
- Semi-improved grazing (sheep/cattle)/ occasional mob stocking with sheep
- Extensive grazing only ^e
- No grazing

5. DOWNWIND VEGETATION COVER *(if Douglas-fir involved see ^g in Notes)*

Wilding establishment influenced by competition from existing vegetation

- Plantation forest, developed pasture (intensive grazing)
- Native forest, shrubland/tussock/grassland with a continuous and dense vegetation cover
- Forest/shrubland/tussock/grassland with few gaps
- Open forest and/or scattered patches of dense shrubland/tussock/grassland with many gaps
- Open slips/rockland and/or light, low-stature shrubland/tussock/grassland

Wilding tree risk	(Y/N)
Are any adjacent properties under the same ownership?	N

Forest360 standard practise for routine forest site inspections is to record and action the control of any pest plant or animal species within the title. Wilding confiner tree species outside of the managed production area are deemed a pest weed species. Once identified, an operation to control or remove the pest plants is planned and implemented in the same way as any other pest weed species.

Assessment Completed By : Adam Humphreys (Senior Forest Manager)

Experience : 14 Years Forest Management and Establishment.

Maintenance and Monitoring.

Regular supervision of the operation will be carried out by FOREST 360 staff to ensure compliance with:

- The NES-CF.
- FOA Forest Practice Guides
- FOREST 360 Operational Procedures.
- The focus is on adhering to these standards and ensuring any issues are dealt with in a timely manner.

The supervision will monitor the site to ensure the control methods are effective and there is no additional action to be undertaken. Furthermore:

- The contractor will be briefed prior to any activity and inducted on the NES-CF conditions as well as any other specific requirements.
- A copy of relevant NES documents will be on site.
- All forestry activities will be carried out in accordance with best practices outlined in the New Zealand Forest Owners Association, New Zealand Environmental Code of Practice for Plantation Forestry.

FOREST 360 uses an internal internet based auditing process which is synchronised with all operational staff and provides timelines and ownership of the audit process. It also provides a follow-up system with alerts and schedules as well as responsibilities for actions to be taken. This is a significant key performance monitoring process used to maintain our environmental as well as health & safety compliance and performance. The tools include:

- Contractor start-ups.
- A range of contractor prescriptions and work instructions tailored to the operation type
- Routine and detailed checks for both environmental and health and safety purposes.
- Improvement plans, improvement notices and corrective action requests.
- A post-works audit and sign-off with the contractor and forest owner to ensure there is no outstanding issues..
