

Afforestation Management Plan

Forest/Block Name: Cranief

Plan Date: 15/04/2025

Planned start date: 26/05/2025

Planned end date: 31/10/2025

Plan prepared by: Mark Byrnes

Property details

Land Owner:

Forest Owner (If different): Roy Trustee 2022 Limited

Block General Location: CDC

Block location Address: 759 Clifton Road, Clifton

Legal Description: LOT 1 DP 487400 SECS 1431R PT 38S CLIFTON SETT SEC 1
SO 20369 PT SECS 43S 44S 45S BLK IV POMAHAKA SD SEC
2 SO 20371 SEC 1 SO 21033 SEC 1 SO 21034 & LAND
MARKED H SO 23069

Property OT: OT399/89

Block Location

Regional Council: ORC

District Council: CDC

Access Road/Nearest Road: Clifton Road

Consultant/Principal Contractor

Consultant Company Name: Venture Forestry Limited

Consultant individual name:

Phone Number:

Postal Address: 176 Puddle Alley Road, Mosgiel 9011

Email Address: admin@ventureforestry.co.nz

Activity

Afforestation to be undertaken manually using people and spades. Planting will be continuous contoured lines wherever possible. There may be a mechanical planter used in some areas

Block/s sizes (as per supplied map)

Block: 25/1
Species: Pinus Radiata
Area(ha): 56

Map Contents

Computer freehold register, date, north arrow:	Yes
Property boundaries within 200m:	Yes
Afforestation/Replanting area boundary	Yes
Species to be afforested or replanted:	Yes
Year Afforestation/Replanting is to occur	Yes
The segmentation boundaries within afforestation or replanting areas required by the wilding tree risk guidelines to calculate a wilding tree risk calculator score:	Yes
Contour lines at less than or equal to 20m intervals:	Yes
Erosion susceptibility classification (map overlay):	Yes
Location of significant natural areas and vegetation clearance:	NA
Features to be protected during operation (Archaeological areas etc):	NA
Any water body or the coastal marine area, including— (i) wetlands larger than 0.25 ha and lakes larger than 0.25 ha; and (ii) rivers to their perennial extent; and (iii) rivers where the bankfull channel width is 3 m or more; and (iv) any outstanding freshwater body or water body subject to a water conservation order; and (v) any setbacks from any identified water body or the coastal marine area:	Yes
Registered drinking water supply and any drinking water sources for more than 25 people within 1 km downstream of the commercial forestry activity:	NA
Clutha District Council Whitelea water take is situated approx. 2.1kms downstream of the planned afforestation area	
Existing roads, tracks, river crossings:	Yes

Significant Natural Areas (SNA):

SNA's present within or adjacent to the Afforestation/Replanting area/s? No
If yes describe,

Is there any Indigenous vegetation present? No
If yes describe,

- How SNA/indigenous vegetation going to be protected? (include description of setbacks etc.)
- Operational restrictions, including restrictions on afforestation or replanting, earthworks operations, or harvesting, as applicable, that will be used to ensure that no commercial forestry activity occurs within the significant natural area

WATER QUALITY & SEDIMENT

River present in Afforestation/replanting Area? No

Bank Full Width?

If yes describe,

Risk of sediment and/or wood debris being mobilised downstream:

There has been no mechanical land preparation undertaken prior to afforestation. The land preparation has been intensive grazing. The areas around the gullies and waterways were afforested in 2024 planting season. With the activity being afforestation, greatly reduces, if not totally eliminates the risk of sediment and/or woody debris being mobilized downstream.

Wetland present in block? No

If yes, describe (size & nature):

Fish spawning indicated in block during the Planting/replanting: No

If yes, Indicated spawning species:

Spawning date range:

Indigenous species of fauna:

Are threatened or at-risk species of indigenous fauna present? No

If yes, describe how these areas will be protected:

How has the land been prepared for afforestation/replanting?

Vegetation Burnt: No

Mechanical land preparation: No

Intensive grazing:	Yes
Sprayed:	No
Other (describe):	NA

Risk of sediment and or slash being mobilized (site specific):

No mechanical land preparation has been undertaken on these blocks. There is no woody debris present that could be mobilized and no disturbance that would cause sediment to be mobilized on these sites

Proposed heavy rainfall contingency and response:

After the afforestation occurs, Venture Forestry will carry out 2 other site visits. This is for release spraying and survival surveys. Other than the two visits outlined above, the land owner is responsible for the site. If requested by the landowner Venture Forestry will carry out further site visits.

Specific triggers or thresholds for action:

If alerted by landowner, or an issue observed when on site as described above.

Description including maintenance, post work monitoring and corrective actions:

With the soil type, topography and lack of disturbance prior to afforestation, it is not expected to be any maintenance or corrective measures will be required. If there are areas that require maintenance of corrective actions, this will be done as soon as possible after discovering the potential risk.

Description of monitoring erosion and sediment effects of afforestation/replanting:

A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. Various other site visits will be made during over the course of a 12 month period for various operational reasons. If there are any issues, or potential issues, then these will be addressed as soon as practical after observing or being made aware.

Set Backs:

10 – 15m Setbacks from power lines required

Setbacks have been assessed during 2023 planting and planning site visits over 2023-24 combined with ground truthing and aerial imagery. Consultation has also been undertaken with the landowner.

Setbacks will be monitored by planting contractor, and checked by Venture Forestry staff carrying out QC on site.

Wilding Trees

Wilding risk calculator score and calculation sheet provided to council? Yes

Description of:

- Any adjacent properties under the same ownership.
Please refer to maps supplied
- Schedule for undertaking wilding inspections.
A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. Various other site visits will be made during over the course of a 12 month period for various operational reasons. If there are wilding trees observed at these visits they will be addressed as soon as practical after observing or being made aware of by the owner.
- How wildings will be removed.
If wilding trees are required to be removed, this will be carried out by hand pulling, or cutting off and ground level and applying poison directly to the stumps.

Indigenous Birds

Procedures for Indigenous birds nesting in block:

Crew to stop work and alert Venture Forestry upon discovery of any indigenous birds nesting within block. Consultation with Parker Conservation as to the best course of action to cause least disturbance to the nesting birds. Harvest in the effected are will not continue until cleared by Parker Conservation or a suitably qualified person deems it no risk to do so.

Nesting is unlikely during the planting season as it is in the winter months.

No indigenous birds sighted at site visits prior to operation.

Plan Amendment:

Plan Amendment made: NA

Date plan amended: Enter

Plan amended by:

Amended plan sent to Regional Council: NA

Amended plan sent to District Council: NA
