

Afforestation Management Plan

Forest/Block Name: Merrie Creek

Plan Date: 12/06/2026

Planned start date: 16/07/2025

Planned end date: 31/10/2025

Plan prepared by: Mark Byrnes

Property details

Land Owner:

Forest Owner (If different): Roy Trustee 2022 Limited

Block General Location: CDC

Block location Address: 29 SPRINGBANK ROAD, CLINTON

Legal Description: LOTS 3-5 DP 453961 LOT 15 PT LOTS 13-14 DDEEDS PLAN
173 PT LOT 1 DP 22922 SECS 6 9 15 68 BLK III SECS 4 6 22-
23 PTS SECS 1-3 5 19 BLK IV WAIPAHI SD SECS 92-93 PT
SECS 37-38 81 BLK IX POMAHAKA SD

Property OT: OT7D/849

Block Location

Regional Council: ORC

District Council: CDC

Access Road/Nearest Road: Merrie Creek Road

Consultant/Principal Contractor

Consultant Company Name: Venture Forestry Limited

Consultant individual name:

Phone Number:

Postal Address: 176 Puddle Alley Road, Mosgiel 9011

Email Address: admin@ventureforestry.co.nz

Activity

Afforestation to be undertaken manually using people and spades. Planting will be continuous contoured lines wherever possible. There may be a mechanical planter used in some areas

Block/s sizes (as per supplied map)

Block: 25/1
Species: Pinus Radiata
Area(ha): 184.8 (subject to potential subdivisions)

Map Contents

Computer freehold register, date, north arrow:	Yes
Property boundaries within 200m:	Yes
Afforestation/Replanting area boundary	Yes
Species to be afforested or replanted:	Yes
Year Afforestation/Replanting is to occur	Yes
The segmentation boundaries within afforestation or replanting areas required by the wilding tree risk guidelines to calculate a wilding tree risk calculator score:	Yes
Contour lines at less than or equal to 20m intervals:	Yes
Erosion susceptibility classification (map overlay):	Yes
Location of significant natural areas and vegetation clearance:	NA
Features to be protected during operation (Archaeological areas etc):	NA
Any water body or the coastal marine area, including— (i) wetlands larger than 0.25 ha and lakes larger than 0.25 ha; and (ii) rivers to their perennial extent; and (iii) rivers where the bankfull channel width is 3 m or more; and (iv) any outstanding freshwater body or water body subject to a water conservation order; and (v) any setbacks from any identified water body or the coastal marine area:	Yes
Registered drinking water supply and any drinking water sources for more than 25 people within 1 km downstream of the commercial forestry activity:	NA
Existing roads, tracks, river crossings:	Yes

Significant Natural Areas (SNA):

SNA's present within or adjacent to the Afforestation/Replanting area/s? If yes describe,	No
Is there any Indigenous vegetation present?	Yes

If yes describe,

- How SNA/indigenous vegetation going to be protected? (include description of setbacks etc.)
 - Established area of mixed variety indigenous vegetation present. 5m setbacks enforced around these areas
- Operational restrictions, including restrictions on afforestation or replanting, earthworks operations, or harvesting, as applicable, that will be used to ensure that no commercial forestry activity occurs within the significant natural area

WATER QUALITY & SEDIMENT

River present in Afforestation/replanting Area?

Yes

Bank Full Width?

If yes describe,

- Tributaries of Merrie Creek originate and flow through the afforestation area

Risk of sediment and/or wood debris being mobilised downstream:

There has been no mechanical land preparation undertaken prior to afforestation. The land preparation has been intensive grazing and spraying only. With no mechanical land preparation, this greatly reduces if not eliminates any risk of sediment or woody debris being mobilized.

Wetland present in block?

No

If yes, describe (size & nature):

Fish spawning indicated in block during the Planting/replanting:

No

If yes, Indicated spawning species:

Spawning date range:

Indigenous species of fauna:

Are threatened or at-risk species of indigenous fauna present?

No

If yes, describe how these areas will be protected:

How has the land been prepared for afforestation/replanting?

Vegetation Burnt:	No
Mechanical land preparation:	No
Intensive grazing:	Yes
Sprayed:	Yes
Other (describe):	NA

Risk of sediment and or slash being mobilized (site specific):

No mechanical land preparation has been undertaken on these blocks. There is no woody debris present that could be mobilized and no disturbance that would cause sediment to be mobilized on these sites

Proposed heavy rainfall contingency and response:

After the afforestation occurs, Venture Forestry will carry out 2 other site visits. This is for release spraying and survival surveys. Other than the two visits outlined above, the land owner is responsible for the site. If requested by the landowner Venture Forestry will carry out further site visits.

Specific triggers or thresholds for action:

If alerted by landowner, or an issue observed when on site as described above.

Description including maintenance, post work monitoring and corrective actions:

With the soil type, topography and lack of disturbance prior to afforestation, it is not expected to be any maintenance or corrective measures will be required. If there are areas that require maintenance of corrective actions, this will be done as soon as possible after discovering the potential risk.

Description of monitoring erosion and sediment effects of afforestation/replanting:

A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. Various other site visits will be made during over the course of a 12 month period for various operational reasons. If there are any issues, or potential issues, then these will be addressed as soon as practical after observing or being made aware.

Set Backs:

10m setbacks from legal boundaries

5m setbacks from waterways

40m setbacks from dwellings on different ownership

Setbacks have been assessed during site visits over 2024 combined with ground truthing and aerial imagery.

Consultation has also been undertaken with the landowner.

Setbacks will be monitored by planting contractor, and checked by Venture Forestry staff carrying out QC on site.

Potential subdivision on this property so boundaries may change.

Wilding Trees

Wilding risk calculator score and calculation sheet provided to council? **Yes**

Description of:

- Any adjacent properties under the same ownership.
Please refer to maps supplied
- Schedule for undertaking wilding inspections.
A minimum of two visits will be carried out post planting, these being for release spraying and for a survival survey. Various other site visits will be made during over the course of a 12 month period for various operational reasons. If there are wilding trees observed at these visits they will be addressed as soon as practical after observing or being made aware of by the owner.
- How wildings will be removed.
If wilding trees are required to be removed, this will be carried out by hand pulling, or cutting off and ground level and applying poison directly to the stumps.

Indigenous Birds

Procedures for Indigenous birds nesting in block:

Crew to stop work and alert Venture Forestry upon discovery of any indigenous birds nesting within block. Consultation with Parker Conservation as to the best course of action to cause least disturbance to the nesting birds. Harvest in the effected are will not continue until cleared by Parker Conservation or a suitably qualified person deems it no risk to do so.

Nesting is unlikely during the planting season as it is in the winter months.

No indigenous birds sighted at site visits prior to operation.
