Executive Summary

LM FARMS

Set in the productive Kaipara district, 455 West Coast Road presents an opportunity to acquire an established dairy farming operation of approximately 179.6 hectares, with 175 hectares of effective dairy area and a peak milking herd of 507 cows.

The farm has demonstrated strong and improving production. The 2025/26 season produced 306,529 kgMS, equivalent to 605 kgMS per cow. This builds on 274,962 kgMS in 2023/24 and 283,906 kgMS in 2024/25, representing an increase of approximately 11.5% over two seasons.

The farming system is built on a strong pasture and maize platform. In 2025/26 the milking platform produced 11.1 tDM of homegrown feed per hectare against a Northland regional average of 9.2, placing it within the top 25% of its benchmark group, and converted 64% of all feed eaten into milk against a regional average of 50%. It is that conversion efficiency, rather than the scale of inputs, that drives the farm's returns.

The operation is run alongside a leased runoff block used for wintering, young stock and supplement production. The runoff does not form part of the freehold offered for sale. In the 2025 season it supplied 456 tDM of grass silage, 459 tDM of maize silage and 266 bales of hay into the system. The lease is available to a purchaser by negotiation, and tenderers are invited to indicate whether they wish to take an assignment. A purchaser who prefers to source supplement on the open market can do so; the platform's own feed production and conversion efficiency are unchanged either way.

Infrastructure includes a centrally located feed pad, a well-maintained 33-aside herringbone dairy shed, limestone races, 61 main paddocks, three bores and a practical range of storage, workshop and calf-rearing facilities. Two three-bedroom homes provide on-farm accommodation for ownership and staff.

Animal and environmental performance further support the quality of the operation. Average somatic cell count improved to 84,458 cells/ml in 2025/26, while the Fonterra Farm Insights Report places the farm within the lowest 25% of its council region for emissions intensity.

Overall, 455 West Coast Road combines proven production, established infrastructure, strong feed utilisation and identifiable scope for further optimisation - providing an incoming owner with a productive dairy platform in an established Northland farming district.

FOR SALE - BY TENDER

(UNLESS SOLD PRIOR)

Any enquiries in relation to this sale to be directed to Warwick Searle, George Cashmore or James Burke of Searle Agribusiness, including clarification or interpretation of any matters within this request for sale, and inspections are strictly by appointment only.

Note: Prospective purchasers are encouraged to obtain independent legal, financial and regulatory advice.

Property Details

ADDRESS	455 West Coast Road, Te Kōpuru, Kaipara, Northland
LEGAL DESCRIPTION	Lot 8 DP 625405
RECORD OF TITLE	1276609 (North Auckland Land District)
TENURE	Freehold
TOTAL LAND AREA	Approximately 179.6 ha
EFFECTIVE DAIRY AREA	175ha
TERRITORIAL AUTHORITY	Kaipara District
REGIONAL COUNCIL	Northland Regional Council
ZONING	Rural Industry Zone A
ELEVATION	20 – 60 m above sea level
PEAK MILKING HERD	507 cows
STOCKING RATE	2.9 cows/ha
MILKING SHED	33-aside herringbone
PADDOCKS	61 main paddocks
FARM ACCESS	Sealed frontage to West Coast Road; limestone races throughout
WATER	Three bores; 50 mm main; water permit AUT.042875.01.01 expiring 30 June 2051
EFFLUENT	Three-pond system, 5,900 m³ storage; discharge consent CON.20123080701 expiring 30 June 2029
RATING VALUATION (1 SEP 2023)	CV \$4,750,000 LV \$3,700,000 Improvements \$1,050,000
ANNUAL RATES	TBC

Key Features

Approximately 179.6 ha total area with 175 ha effective dairy platform

507-cow peak herd; split spring/autumn calving system

306,529 kgMS produced in 2025/26

605 kgMS/cow in 2025/26

11.1 tDM/ha homegrown feed on the milking platform – top 25% of the regional benchmark group

64% of feed eaten converted to milk, against a regional average of 50%

33-aside herringbone dairy shed and centrally located feed pad

61 main paddocks connected by limestone races

Three bores with 50 mm water line supplying the property

Two three-bedroom homes plus extensive sheds, barns and workshop facilities

Average SCC of 84,458 in 2025/26

Lowest 25% regionally for emissions intensity

Leased runoff supports wintering, young stock and supplement production – available to a purchaser by negotiation, not part of the title

Approximately 14 km from Dargaville; primary schooling available at Te Kōpuru

Farm Information

LIVESTOCK & PRODUCTION

The property operates a 507-cow dairy system on split spring and autumn calving. The system spreads calving and workload across the year, with herds managed through structured calving, grazing and wintering rotations between the dairy platform and the leased runoff. Herd liveweight averages 480 kg.

A practical consequence of split calving is flexibility at settlement: an incoming purchaser is not tied to a 1 June changeover, and the vendor is open to a negotiated possession date.

ANIMAL HEALTH AND MILK QUALITY

Average somatic cell count for 2025/26 was 84,458 cells/ml, improving from 94,940 in 2024/25 and 88,726 in 2023/24, and comfortably inside the industry ambition of 100,000. The regional council average is 203,618.

361 DAYS OF MILK QUALITY EXCELLENCE IN THE 2025/26 SEASON.

Feed System & Production

The operation is run as a System 5, combining a productive pasture and maize platform with feed transferred from the leased runoff and bought-in supplement. Fonterra benchmarks the property against Northland/Auckland System 5 farms.

WHERE THE FEED COMES FROM

The figures below are from the 2025/26 Fonterra Farm Insights Report, calculated across the 175-hectare effective dairy platform. Feed grown on the platform is shown separately from feed brought in from the leased runoff and from feed purchased on the open market.

FEED SOURCE (2025/26)	TDM/HA	APPROX. TOTAL	SHARE
Grown and eaten on the milking platform	11.1	1,940 tDM	57%
Transferred from the leased runoff (grazing)	4.1	720 tDM	21%
Purchased and brought in	4.2	735 tDM	22%
Total feed eaten	19.4	3,395 tDM	100%

Against a Northland regional average of 9.2 tDM/ha, the platform's 11.1 tDM/ha places the property in the top 25% of its regional council benchmark group for homegrown feed.

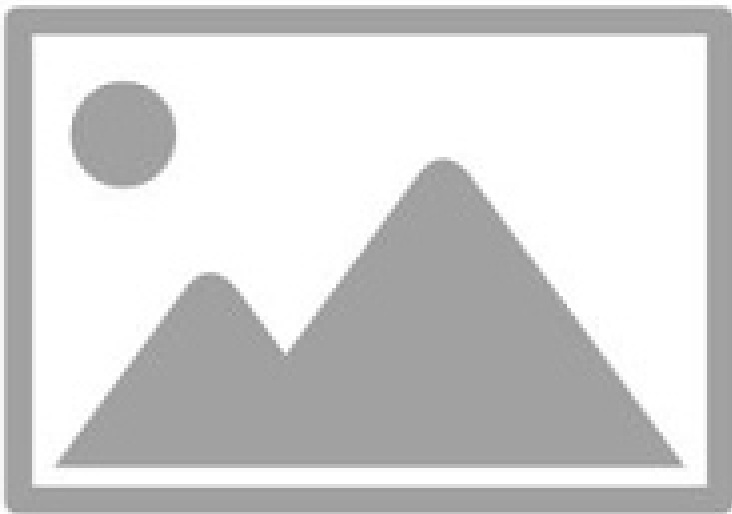

SUPPLEMENT AND THE LEASED RUNOFF

Purchased supplement in 2025/26 comprised 510 t PKE, 227 t molasses and 210 t DDG, plus smaller quantities of canola and soy. Total imported supplement, including feed transferred from the runoff, was 3.2 tDM per cow.

In the 2025 season the leased runoff supplied 456 tDM of grass silage, 459 tDM of maize silage and 266 bales of hay into the system, and also carried young stock and wintered cows. The vendor advises that no bulk forage was purchased on the open market in that season, the grass and maize silage requirement was met from the dairy platform and the leased runoff combined.

The runoff does not form part of the freehold offered for sale. The lease is available to a purchaser by negotiation, subject to the lessor's consent, and the vendor will facilitate the introduction.

PRODUCTION AND EFFICIENCY, THREE SEASONS				
MEASURE	2023/24	2024/25	2025/26	REGION 2025/26
Milk solids (kgMS)	274,962	283,906	306,529	119,967
Production per cow (kgMS/cow)	548	561	605	339
Production per kg liveweight (%)	114	117	126	75
Homegrown feed eaten (tDM/ha)	10.9	11.3	11.1	9.2
Imported supplement (tDM/cow)	2.7	2.8	3.2	0.7
Feed converted to milk (%)	62	63	64	50
Average somatic cell count	88,726	94,940	84,458	203,618
Peak cows / effective ha	502 / 175	506 / 175	507 / 175	339 / 155

Dwellings & Improvements

ACCOMMODATION

Main residence — A three-bedroom weatherboard home with one bathroom and a carport with internal access, positioned near the dairy shed for practical farm management. Bore water supply and septic tank. Two heat pumps.

Second residence — A three-bedroom home with deck and double garage, one bathroom and aluminium joinery, suitable for staff accommodation. Tank water supply and septic tank. One heat pump.

DAIRY AND FARM BUILDINGS

33-aside herringbone dairy shed with concrete yards, DeLaval plant, Waikato vacuum pump, Corkill milk control pump, Milfos jetters, three hot water cylinders, vat wash system and teat sprayer

Centrally located feed pad

Effluent storage pond, with effluent pump(s), hydrants, pipework and irrigator

One five-bay hay and implement shed, approximately 15 m × 18 m — three open bays and two enclosed bays with concrete floor

One five-bay workshop and implement shed — two bays with concrete floor and three-phase power

One lockable agrichemical shed

One calf shed, six bays deep, at the tanker roundabout

One storage shed and bobby-calf pen with loading ramp

One rectangular hay and calf barn (paddock 44)

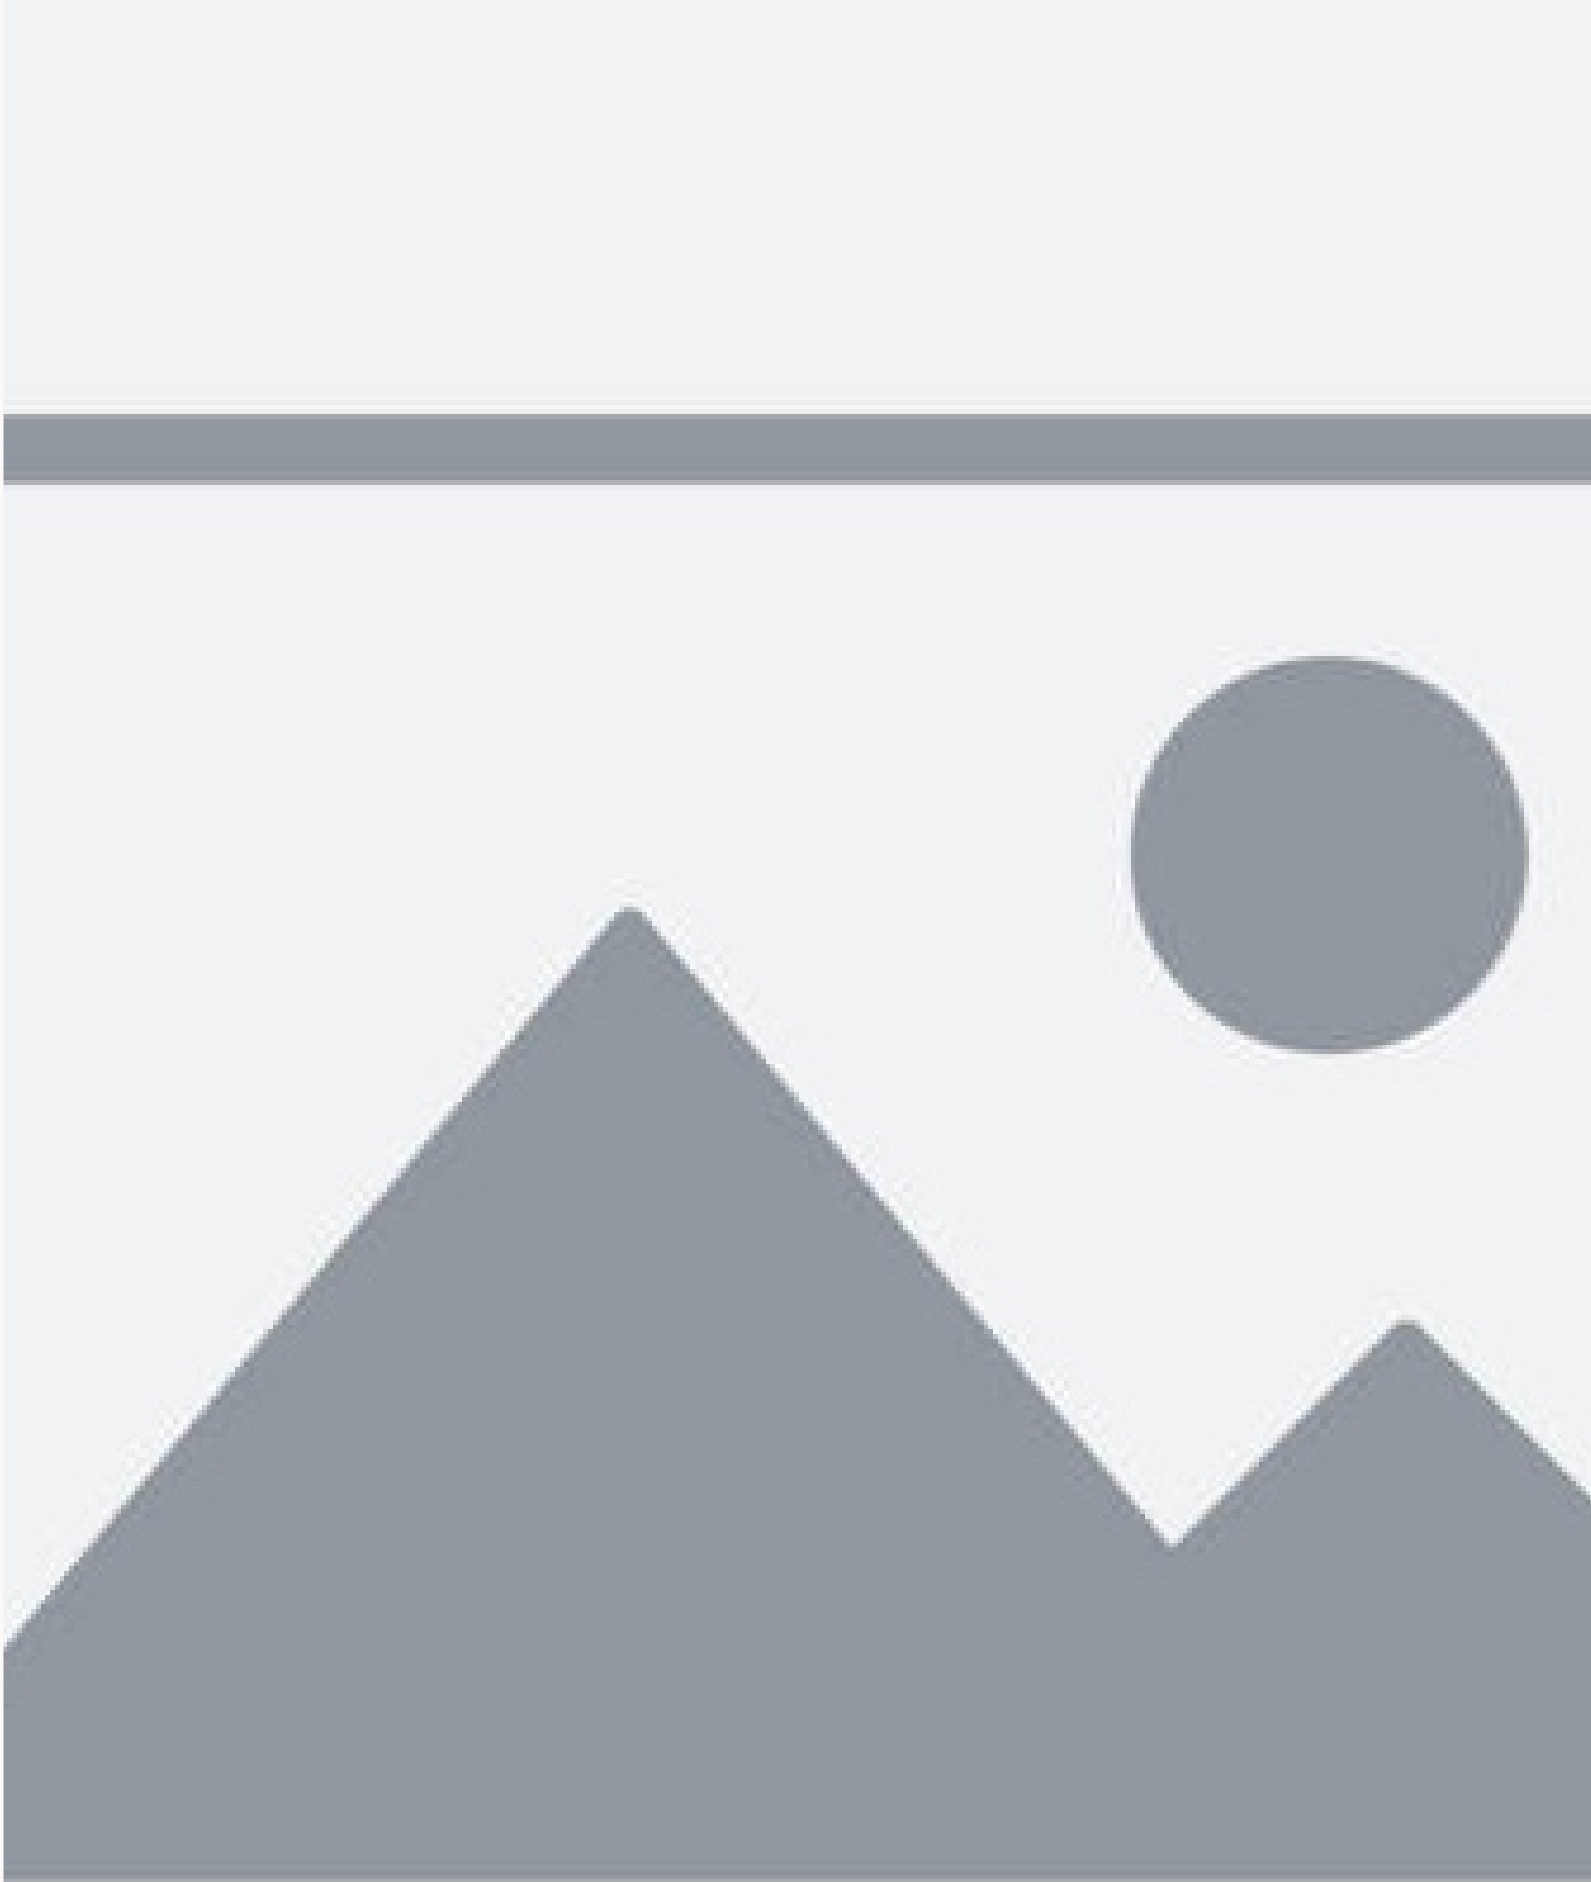

One three-bay half-round barn (paddock 32) — holds 96 round bales made on farm or runoff

One two-bay half-round barn (paddock 42) — holds 64 round bales

One two-bay shed (paddock 48)

One motorbike shed adjacent to the main residence

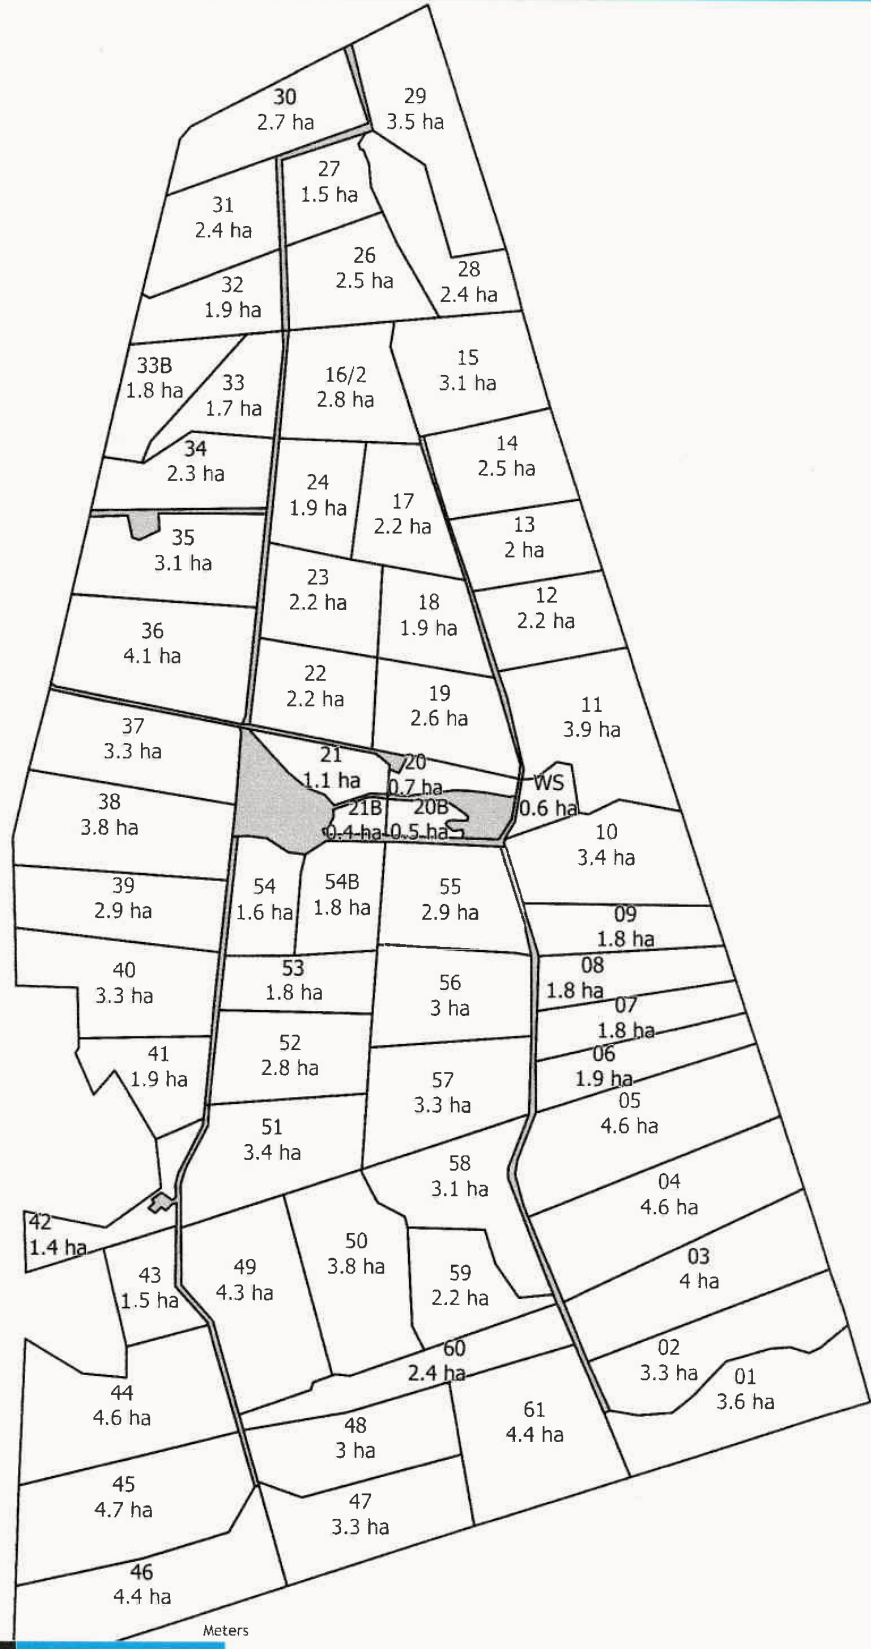

Cattle yards including race, head bail and loading ramp; mains electric fence energiser units and all permanent electric fencing

Location

455 West Coast Road sits at Te Kōpuru in the Kaipara District, approximately 14 kilometres south-west of Dargaville on the western side of the Northern Wairoa. The property has sealed road frontage to West Coast Road and lies between 20 and 60 metres above sea level.

Dargaville provides the full range of services, agricultural supply and professional support. Primary schooling is available at Te Kōpuru. The district is long-established pastoral and dairy country, and the west coast is close by for fishing and recreation.

Local Key Destinations	DISTANCE
DARGAVILLE TOWNSHIP	14km
WHANGAREI	98km
KERIKERI	121km
WARKWORTH	130km
AUCKLAND	208km

Climate

SUNSHINE	TEMPERATURE	RAINFALL
1,900 – 2000 mean annual sunshine	15.3 °C mean annual temperature	1,137 mm/annually

WHAT THE CLIMATE MEANS FOR THIS FARM

Northland's mild temperatures, long growing season and roughly 1,800 growing degree days support a long pasture-growing window and early spring growth. The trade-off is summer. NIWA records one to two dry spells a year averaging around 20 days between December and March, and most of the western Kaipara runs a soil moisture deficit through at least half of summer.

The farming system here has been built around that reality rather than against it. The maize programme, the feed pad, the bought-in supplement and the leased runoff all exist to carry the herd through the dry, which is why the operation has held and grown production through both wet and dry seasons.

Land Characteristics

CONTOUR AND LAYOUT

The property has easy, undulating contour rising from approximately 20 metres to 60 metres above sea level, with good fertility and a thoughtfully planned paddock layout. The dairy platform is subdivided into 61 main paddocks served by limestone races, supporting efficient stock movement and straightforward day-to-day management. Approximately 3.3 kilometres of farm track.

SOILS

According to S-Map (Manaaki Whenua – Landcare Research) the unit comprises five soil siblings:

SOIL SIBLING	SHARE	DESCRIPTION
Maitahi (Sib 2)	30%	Moderately deep, well drained, sand
Hope (Sib 3)	30%	Moderately deep, well drained, loam
Kara (Sib 11)	20%	Shallow, well drained, loam
Kara (Sib 8)	10%	Moderately deep, imperfectly drained, loam
Pukapo (Sib 5)	10%	Moderately deep, well drained, loam

In summary: approximately 90% of the property is well drained and 10% imperfectly drained, with roughly 30% sands and 70% loams.

WHAT THE SOILS MEAN IN PRACTICE

Well-drained soils on easy contour are a significant working advantage in a Northland dairy system. They carry stock through winter and early spring with low pugging risk, allow cows out on grass when heavier country is shut up, and give the operator flexibility at both ends of the season.

Land Characteristics

SOIL FERTILITY

The dairy platform was soil tested in October 2024 by Hill Laboratories, submitted through Plank Nutrient Consultancy. Three composite samples were taken across the non-effluent, established effluent and new effluent blocks.

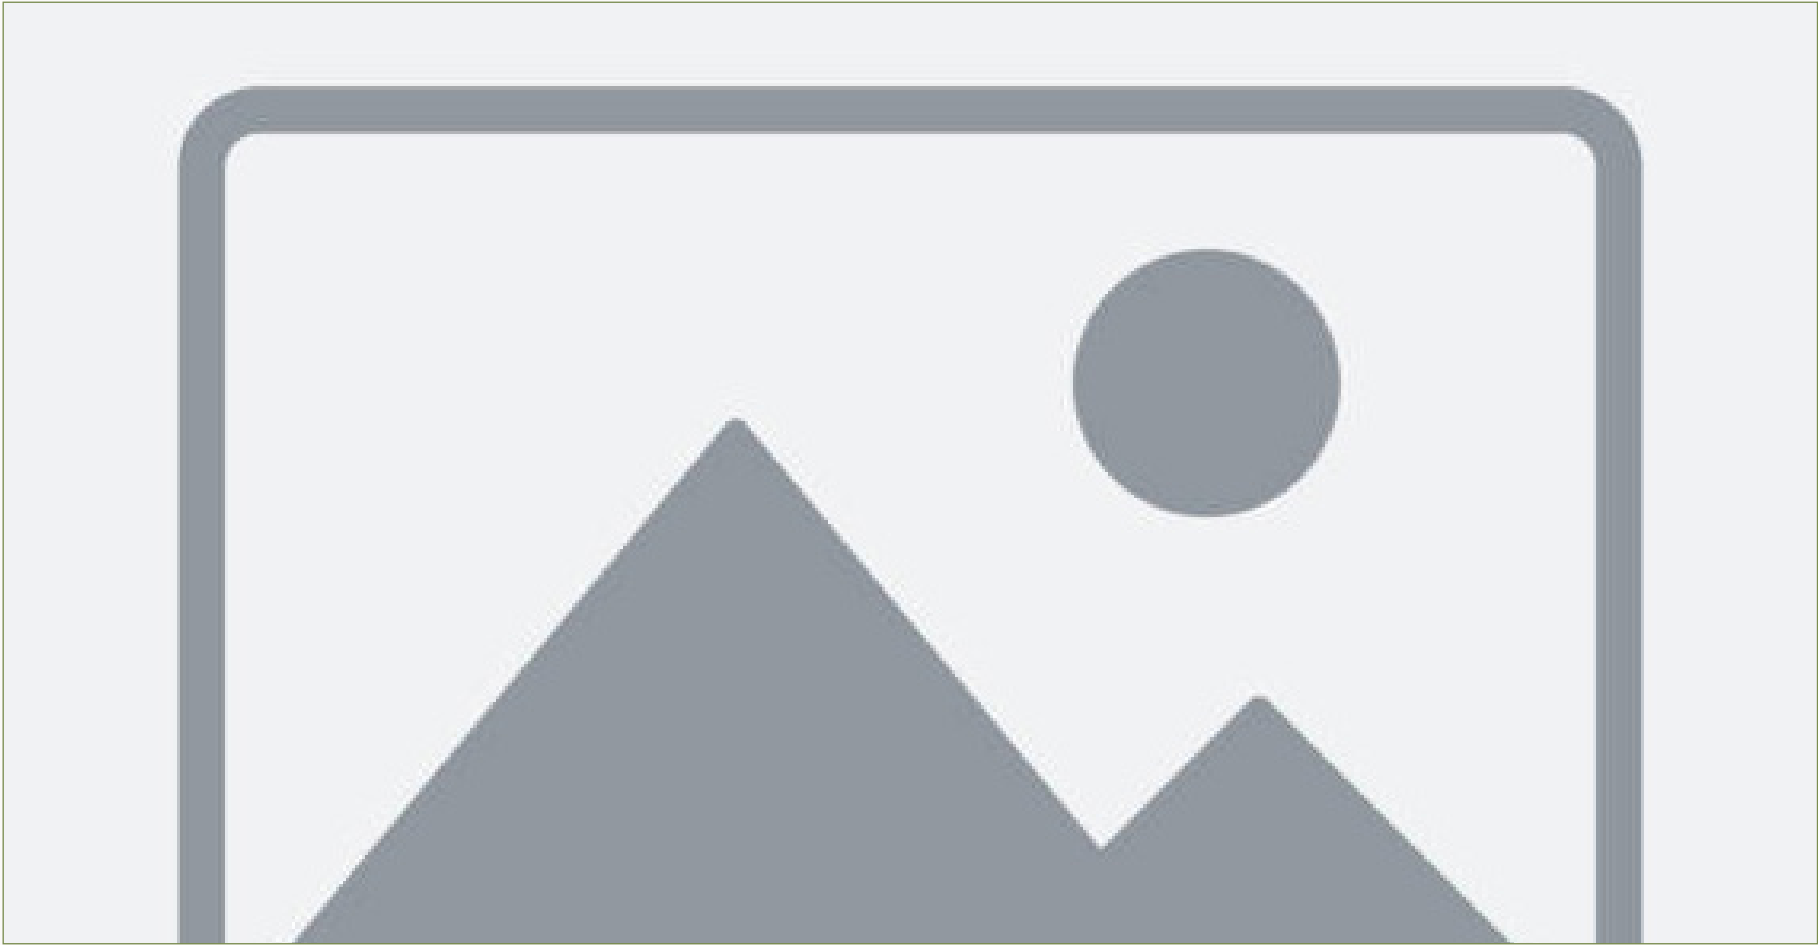

MEASURE	NON-EFFLUENT	ESTABLISHED EFFLUENT	NEW EFFLUENT	TARGET
pH	5.6	6.0	6.2	5.8–6.2
Olsen P (mg/L)	43	30	30	20–30
Cation exchange capacity (me/100g)	16	14	13	—
Total base saturation (%)	57	68	75	—
Magnesium (% base saturation)	8.2	16.9	11.9	—

Olsen P sits at or above the standard target range across all three blocks. Hill Laboratories notes in the certificate that for intensive systems with high stocking rate or high production per hectare, an Olsen P optimum of 30–40 on sedimentary soils may be justified — placing this property in a sound rather than an over-fertilised position.

WATER

Water is supplied from three bores through a 50 mm main reticulated across the property, with storage tanks, ballcocks and paddock troughs throughout. Bore pumps, electric motors and all control gear are included in the sale.

The groundwater take is authorised by Northland Regional Council consent AUT.042875.01.01, granted 19 July 2021 and expiring 30 June 2051, a further 25 years of secure tenure.

Sale Process

FOR SALE - BY TENDER

This property is to be sold by way of Tender with submissions due 4pm, Wednesday 4 November, 2026 (unless sold prior. Prices are plus GST (if any)).

TENDERS BASIS:

- Land and buildings only, with vacant possession; or
- As a going concern, including livestock, plant and machinery — a full LM Farms livestock, plant and machinery list is available in the data room.

Data Room

THE FOLLOWING ARE AVAILABLE TO QUALIFIED PURCHASERS:

- Runoff lease agreement and lessor consent to assignment
- Fonterra Farm Insights Reports 2023/24, 2024/25 and 2025/26
- QCONZ farm dairy assessment
- Hill Labs soil tests and Plank Consultancy fertiliser records
- Water permit AUT.042875.01.01 and discharge consent CON.20123080701
- Northland Regional Council Farm Waste Monitoring Reports
- Farm building, plant and chattels schedules
- LIC herd test and in-calf records; livestock records for going concern
- Machinery list for going concern
