Executive Summary

JELLDALE FOREST

Jelldale Forest is a rare, well-established carbon and/or production forestry investment of approximately 798 hectares, set in the dramatic coastal hill country of Waipapa Bay, overlooking the Clarence River in the Kaikōura District. The property is well located being roughly 40km north of Kaikōura township via Waiau-Toa Road. At its core is a genuinely high-quality 121.7-hectare Radiata pine stand, planted between 1994 and 1997. 106.96ha is registered as Post-1989 Forest Land under the ETS. With 31,775 NZU's transferring on settlement and ongoing carbon income accounted for under the forest's own Field Measurement Approach (FMA) carbon tables, this is a forestry asset with both immediate value and a proven, transparent carbon position.

Beyond its forestry and carbon fundamentals, Jelldale Forest offers something genuinely special: one of the more complete hunting and recreation packages available on the market today. Rising from the Clarence River flats to a commanding 1,100m above sea level (ASL) at the rear of the property, it delivers spectacular 360-degree views in every direction — out to the coast, with the North Island visible on a clear day, across snow-capped mountains, and down onto the Clarence River itself — all just a short distance from the sea. Bordered on most sides by DOC public conservation land, the property is a genuine back-country playground, home to red deer, fallow deer and pigs, with chamois also known to visit, a rare and highly sought-after combination in this part of the country. A well-tracked network gives easy access throughout, while a three-bedroom main hunting hut with solar power and gas, a further single-room hut towards the rear of the property, and a three-bay shed with an additional lockable tilta bay mean a purchaser can be using and enjoying the property from day one.

Jelldale Forest pairs a quality forestry and carbon asset with immediate income and an outstanding, ready-to-use recreational property — a genuinely rare combination in the current market.

FOR SALE - BY TENDER

(UNLESS SOLD PRIOR)

Any enquiries in relation to this sale to be directed to Warwick Searle, George Cashmore or James Burke of Searle Forestry, including clarification or interpretation of any matters within this request for sale, and inspections are strictly by appointment only.

Note: Prospective purchasers are encouraged to obtain independent legal, financial, forestry, and regulatory advice.

Forestry Overview

Jelldale Forest comprises a mature, well-established Radiata pine crop totalling 121.7 hectares, planted across three age classes in 1994, 1995 and 1997. Approx. 106.98 hectares of the forest is registered as Post-1989 Forest Land under the ETS and is accounted for using a stock-change model based on the forest’s own participant-specific Field Measurement Approach (FMA) carbon tables, rather than generic regional lookup tables, giving purchasers a higher level of confidence in the reported carbon position.

Beyond the pine estate, the property includes approximately 600 plus hectares of regenerating native bush, including mature mataī, tōtara, mānuka and kānuka, set within the large-scale coastal property. This native cover is not currently registered under the ETS but may present a future carbon registration opportunity, alongside potential apiculture income. An existing non-consented hunting hut and the property’s remote, unspoiled character give it strong recreational appeal alongside its forestry and carbon fundamentals.

Access is by four-wheel-drive via Waiau-Toa Road, with stream crossings subject to weather conditions. Purchasers should factor access and haulage logistics into any harvest planning given the property’s distance from Kaikōura and the wider Canterbury/Marlborough processing and export network.

Land Use Capability

Aspect

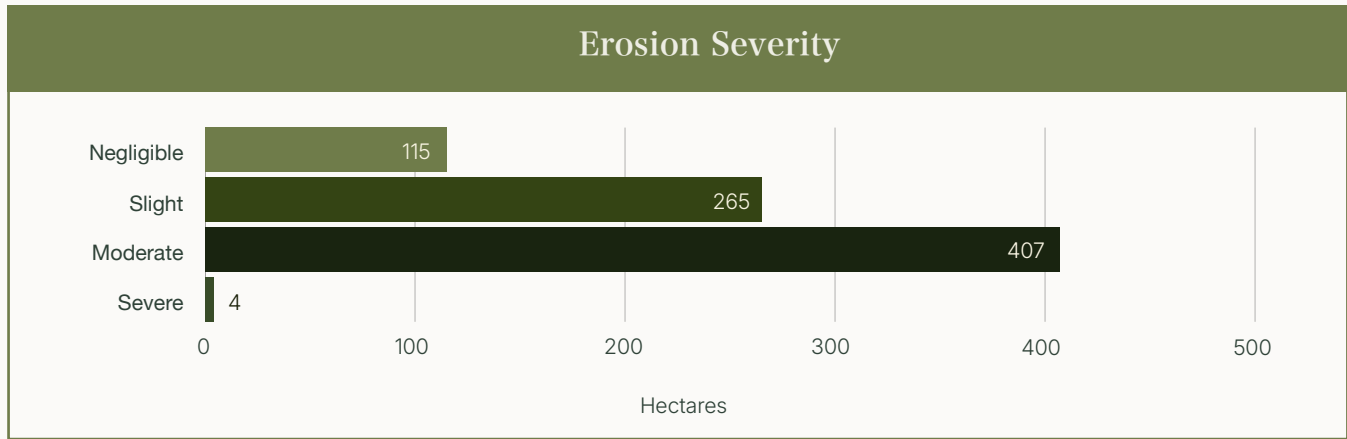

Environmental Risk

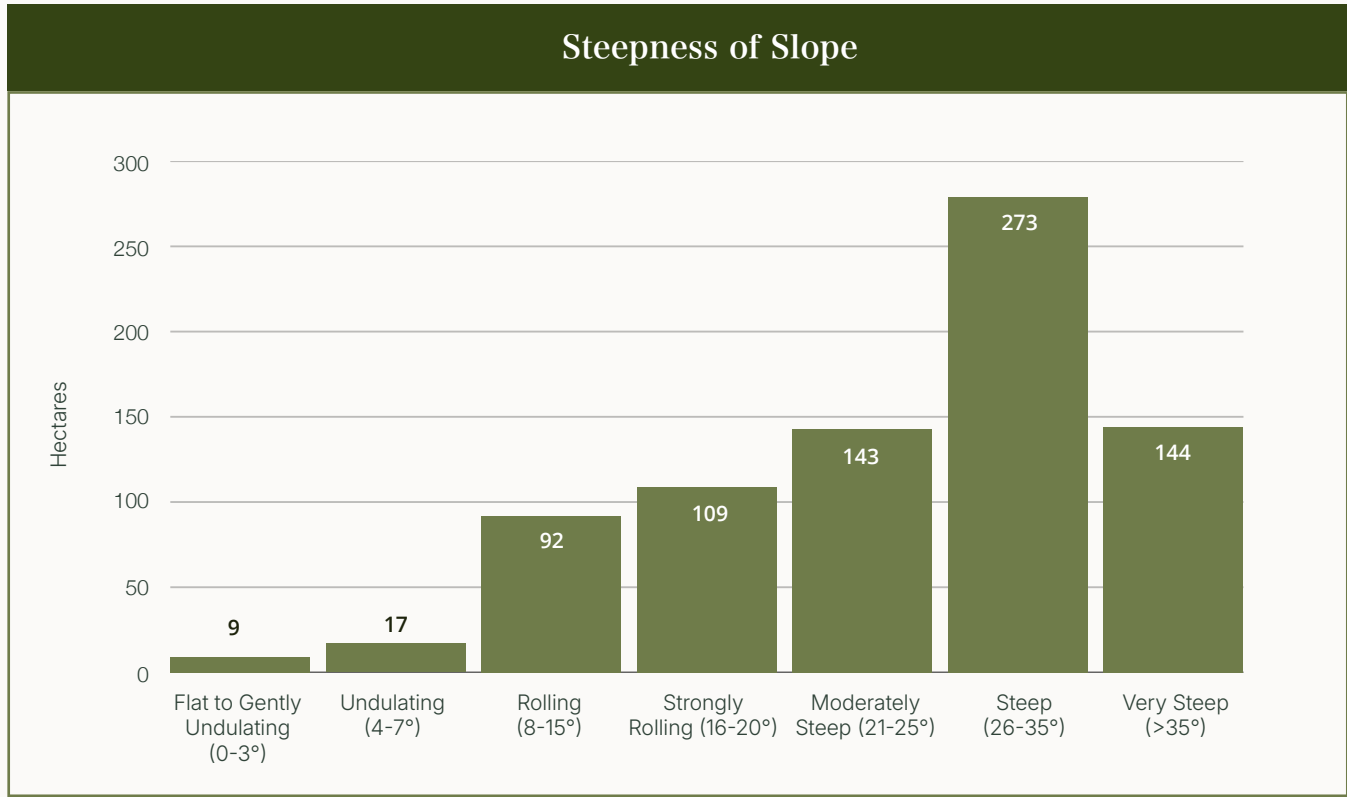

The major regulations affecting environmental management of plantation forests in New Zealand are the National Environmental Standards for Commercial Forestry (NES-CF). The key areas covered under the NES-CF are erosion risks, water quality, water habitat and wilding tree risks.

Erosion Susceptibility Class

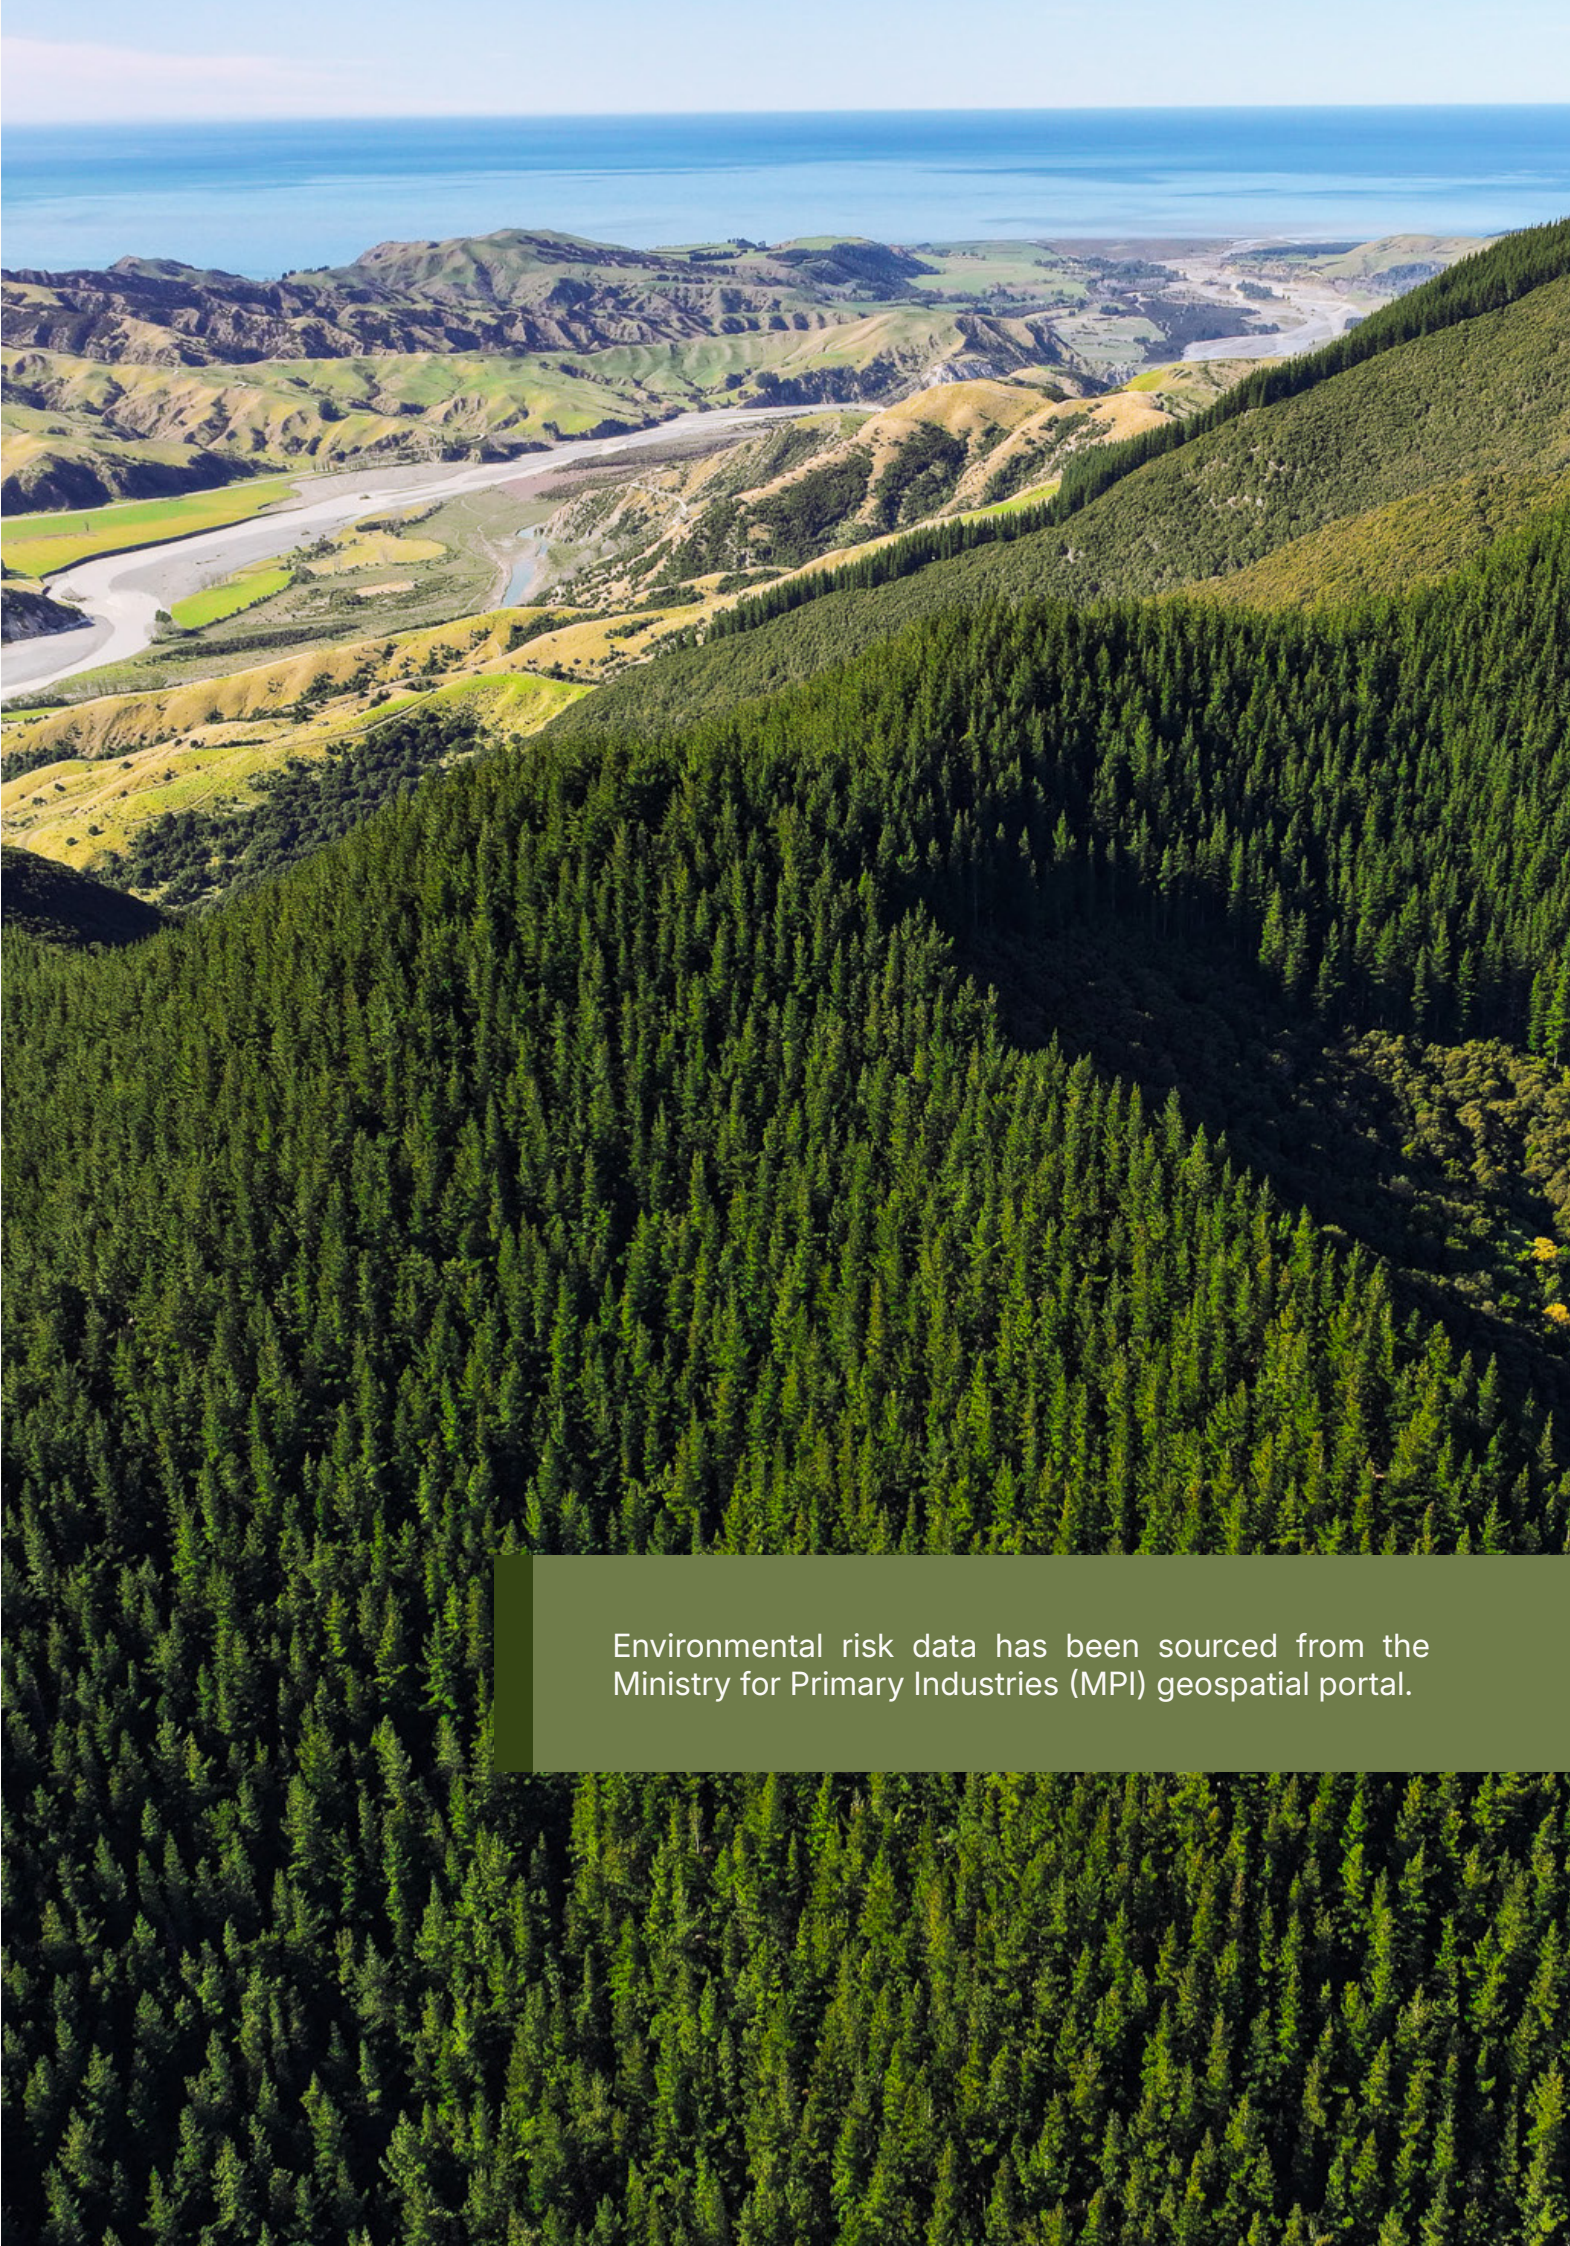

Jelldale Forest’s erosion susceptibility, as classified under the MPI NES-CF framework, is predominantly low to moderate — approximately 372ha (47%) low and 243ha (31%) moderate. Approximately 168ha (21%), concentrated in the property’s steeper terrain, is classified as high susceptibility, which purchasers should factor into any future harvest and re-establishment planning on those areas.

Environmental risk data has been sourced from the Ministry for Primary Industries (MPI) geospatial portal.

Recreation & Hunting

Jelldale Forest sits within one of the South Island’s most renowned remote hunting and recreation landscapes. The property overlooks the Clarence River (Waiau-Toa) in coastal hill country adjacent to the Seaward Kaikōura Ranges, and directly adjoins the Department of Conservation’s Ka Whata Tū o Rākihouia Conservation Park — a vast, rugged high-country landscape straddling the Seaward Kaikōura Range and home to some of the highest non-Southern Alps mountains in New Zealand.

The property is bordered on most sides by DOC public conservation land, giving it the feel of a private in-holding within a much larger wilderness estate. Confirmed game on the property includes red deer, fallow deer and pigs, with chamois also known to visit — a genuinely rare combination for a North Canterbury/Marlborough border property and a strong drawcard for hunting-focused buyers. The property itself rises from the Clarence River flats up to a high point of approximately 1,100m above sea level (ASL) at the top rear of the property, giving genuine back-country relief within an otherwise accessible forestry holding. The landscape is a varied mix of multiple large open clearings and extensive pockets of mature native bush, alongside the high quality radiata timber stand. Multiple vantage points across the property offer spectacular 360-degree views: out towards the coast with the North Island visible on a clear day, across surrounding snow-capped mountains, and down onto the Clarence River below. The property sits only a short distance from the coast itself creating a unique point of difference for a back-country hunting and forestry block.

BUILDINGS

BUILDINGS	BASICS
Main Hunting Hut	3 bedrooms; 4WD tracked access; solar power; gas hot water and cooking; not consented
Rear Hut	Additional single-room hut towards the rear of the property, providing a further base for hunters
Shed	3-bay shed plus 1 additional lockable tilta bay

APIARY OPPORTUNITY

Beyond forestry and carbon income, the property’s large portions of mānuka and kānuka cover offer a genuine apiary opportunity. Mānuka-dominant scrub at this scale is well suited to beehive placement for mānuka honey production creating a well-established secondary income stream on comparable Marlborough and Kaikōura coast properties and one that can run alongside continued forestry and carbon management without competing for land use.

Emissions Trading Scheme

106.96ha of Jelldale Forest’s pine crop is registered as Post-1989 Forest Land under the ETS, with 31,775 NZU’s set to transfer on settlement and continued annual carbon income as the mature crop is accounted for under the stock-change model.

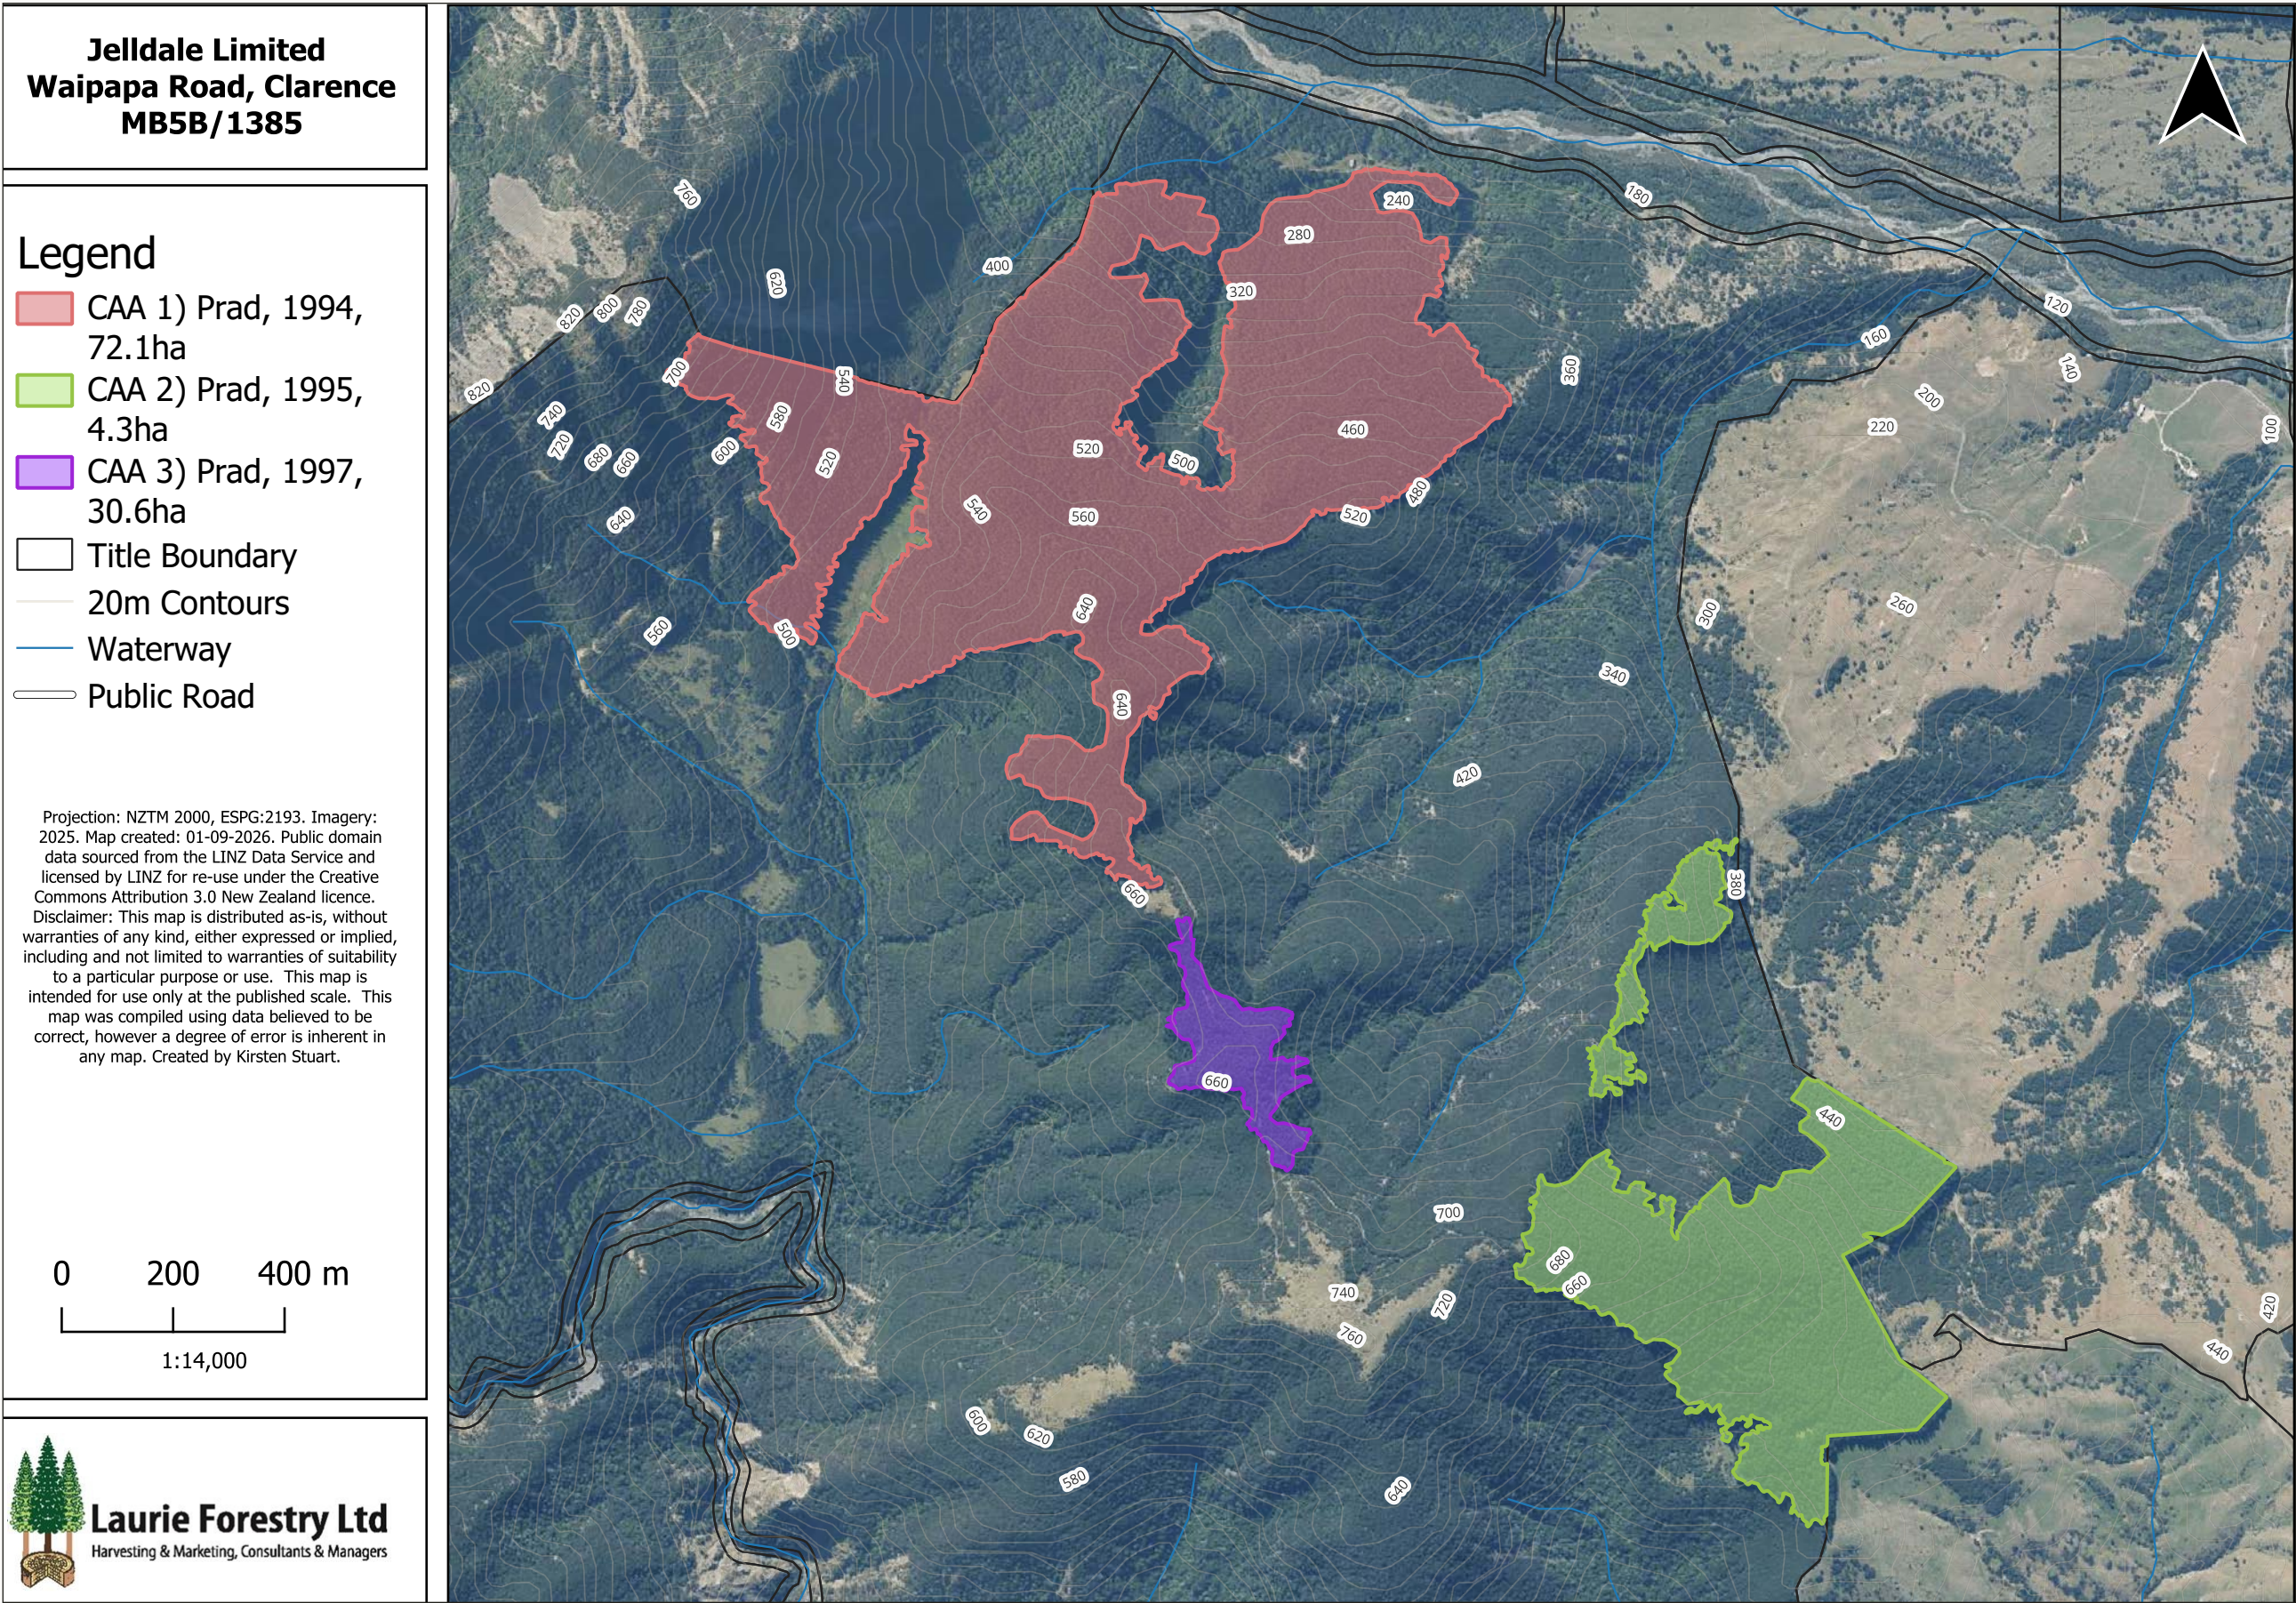

Additional ETS Opportunity — approx. 36ha

Beyond the registered exotic crop, approximately 32.57ha of the property’s shrub/mānuka/kānuka and 3.54ha of native bush sit on land that potentially was not forest as at 31 December 1989. Because this land already carries qualifying woody cover today, it has a genuine — though MPI-determined — case for independent Post-1989 Forest Land registration, separate from and additional to the existing exotic forest ETS position. This represents a real, previously unquantified carbon opportunity for a purchaser to investigate.

ETS PATHWAYS AVAILABLE TO PURCHASERS
HARVEST AND RE-ESTABLISHMENT NZUs surrendered at harvest, sequestration recommences on replanting.
PERMANENT CARBON FORESTRY NZUs accrue indefinitely without surrender obligation; a strong fit given the stand’s quality, offering reliable income while foregoing timber revenue.
PAIRED PORTFOLIO STRATEGY Integrating Jelldale into a broader ETS-registered portfolio to manage surrender obligations and sequestration timing
NEW POST-1989 REGISTRATION New Post-1989 registration of the ~36ha identified above, subject to MPI assessment, as an additional standalone or paired carbon position.

Note: Full ETS account details, including current unit holdings, registration history, and FMA participant-specific carbon tables, are available to registered parties on request.

Location

Jelldale Forest is located in Waipapa Bay/Clarence, in the Kaikōura District, approximately 40km from Kaikōura township via Waiau-Toa Road. The property sits in a large-scale, remote coastal wilderness setting between the Inland and Seaward Kaikōura Ranges, with current access by four-wheel-drive only and stream crossings subject to weather conditions.

Permanent vehicle access to the wider Clarence Valley has been affected since the loss of the former Glen Alton bridge, and Kaikōura District Council continues to investigate options including a new bridge and an alternative road alignment to restore a permanent crossing. Purchasers should factor current access conditions and haulage logistics into any harvest or development planning, noting the wider Canterbury and Marlborough processing and export network serves the region.
