

FARM WASTE MONITORING REPORT 2023

Inspection Date	Farm Name	FDE #	REGIME #
31 July 2023	Gillett LJ & Slagter M N	8108	REG.030807.01

Michael Nicolaas Slagter
lmfarms@xtra.co.nz

Compliance with Consent Conditions		
Condition	Compliant	Reason
Condition 1 Increase in cow numbers (520) or change to milking regime (split) notified.	Yes	
Condition 2 Wastewater from dairy and feedpad treated within at least 3 ponds.	Yes	
Condition 3 Treatment system storage volume of 5900m3.	Yes	
Condition 4 Ponds sealed.	Yes	
Condition 5 Discharge only when conditions not suitable for land application.	Yes	
Condition 6 Ponds at or near empty by 1 May.	-	
Condition 7 Treatment system adequately maintained.	Yes	
Condition 8 Stormwater diversion system for roof, yard and catchment. (Half of dairy roof exempt, 2016)	Yes	
Condition 9 T-piece or baffle on outlet of pond 1.	Yes	
Condition 10 Ponds fenced to prevent stock damage.	Yes	
Condition 11 All water quality conditions met .	-	No discharge at time of inspection.
Land Application Does the land application system meet the permitted activity criteria for the Regional Rules for Northland.	-	No recent irrigation.

Overall Compliance Status
Full Compliance

Invoice

An invoice for \$358.50 (incl. GST) will follow at a later date. This covers council's travel, fieldwork, and administration costs for the inspection. Please contact the farm monitoring team at council's Whangarei office if you have any questions.

Letter Sent Date

03/08/2023

Resource Consent

Document Date: 19.07.2021

***Pursuant to the Resource Management Act 1991, the Northland Regional Council
(hereinafter called "the council") does hereby grant a Resource Consent to:***

MICHAEL NICOLAAS SLAGTER AND LANA JANE GILLET T/A LM FARMS PARTNERSHIP

To undertake the following activity on Allot 107 PSH OF Kopuru (455 West Coast Road, Te Kopuru), associated with the operation of a dairy farm:

AUT.042875.01.01 Take groundwater from three bores, at or about co-ordinates 1679284E 6010660N, 1679490E 6010763N and 1680025E 6011094N, for the purpose of dairy shed supply.

Note: All location co-ordinates in this document refer to Geodetic Datum 2000, New Zealand Transverse Mercator Projection.

Subject to the following conditions:

- 1 The combined total rate of taking from the bores shall not exceed:
 - (a) 254.8 cubic metres per week, being a period of seven days; nor
 - (b) 13,250 cubic metres per year, being 1 July to 30 June inclusive.
- 2 Prior to the 1 December 2021, a meter(s) that measures the flow in cubic metres to an accuracy of $\pm 5\%$ shall be installed at a location(s) that will record the total volume of water taken for use in the dairy shed. The meter(s) shall be operated and maintained in accordance with the manufacturer's specifications. Safe and easy access to the meter for the purposes of undertaking visual inspections of the meter(s) and water take measurements shall be provided at all times.
- 3 A record of water taken weekly in cubic metres using the meter(s) required by Condition 2 shall be kept, including nil abstractions. A copy of this record for the period 1 July to 30 June (inclusive) shall be forwarded each year to the council's assigned monitoring officer by the following 31 July. In addition, a copy of these records shall be forwarded immediately to the council's assigned monitoring officer on written request. The records shall be in an electronic format that has been agreed to by the council.

Advice Note: *If no water is taken during the period 1 July to 30 June (inclusive) then the Consent Holder is still required to notify the council in writing of the nil abstraction. Water use record sheets in an electronic format are available from the council's website at www.nrc.govt.nz/wur.*

- 4 The reticulation system and components shall be maintained in good working order to avoid or minimise leakage and wastage.

5 The council may, in accordance with Section 128 of the Act, serve notice on the Consent Holder of its intention to review the conditions annually during the month of November for any one or more of the following purposes:

- (a) To deal with any adverse effects on the environment that may arise from the exercise of the consent and which it is appropriate to deal with at a later stage; or
- (b) To review the allocation in Condition 1, or
- (c) To review the allocation of the resource.

The Consent Holder shall meet all reasonable costs of any such review.

EXPIRY DATE: 30 JUNE 2051

Advice Note: The council may, if it issues a Water Shortage Direction under Section 329 of the Act, require the Consent Holder to reduce the amount of water taken, and/or restrict the time(s) when water is taken, and/or impose a temporary cessation of taking of water.

This consent is granted this Nineteenth day of July 2021 under delegated authority from the council by:

A handwritten signature in blue ink, appearing to read 'Paul Maxwell', is written over a horizontal line.

Resource Consent

*Pursuant to the Resource Management Act 1991, the Northland Regional Council
(hereinafter called "the Council") does hereby grant a Resource Consent to:*

**Lana Jane GILLETT, Michael Nicolaas SLAGTER & Peter William Byers,
T/A L M FARMS, 455 WEST COAST ROAD, RD 1, DARGAVILLE 0371**

To discharge treated farm dairy wastewater from a dairy shed and feed pad to an unnamed tributary of the Makaka Creek on Allotment 107 Blk V Tokatoka SD, at or about location co-ordinates 1679557 E 6010888 N.

Note: All location co-ordinates referred to in this consent refer to Geodetic Datum 2000, New Zealand Transverse Mercator Projection.

Subject to the following conditions:

- 1 The Consent Holder shall notify the Council's Monitoring Manager in writing of any increase in the number of cows being milked or a change to the calving regime, at least one month prior to that change being made.

Advice Note: *The effects of the treated wastewater discharge were assessed based on the Consent Holder milking a maximum of 520 cows each day and undertaking a split calving regime. Should the number of milking cows increase or the calving regime change, then the adequacy of the existing treatment system will be reassessed.*

- 2 All wastewater generated from the dairy shed and feed pad shall receive treatment within at least a three pond system that is of a similar design, size and location as that installed at the date of commencement of this consent, prior to it being discharged to the unnamed tributary of the Makaka Creek.

- 3 The Consent Holder shall, prior to 31 March 2013, upgrade the treatment system so that it has a total wastewater storage volume of at least 5,900 cubic metres.

Advice Note: *The above volume is based on the minimum volume required for approximately 150 days of wastewater storage, as recommended by the Dairying and the Environment Committee (2006) industry guidelines entitled "Managing Farm Dairy Effluent" (3rd edition) for a maximum summer milking herd of 520 cows, a maximum winter milking herd of 250 cows and use of the feed pad.*

- 4 The base and walls of the treatment ponds shall, as far as is practicable, be sealed to minimise the seepage of wastewater to land from the treatment ponds.
- 5 The Consent Holder shall only exercise this consent during periods when the application of the treated wastewater to land would result in either:
 - (a) Overland flow of the treated wastewater; or
 - (b) Ponding on the land surface for longer than 3 hours following application of the treated wastewater.

Advice Note: *The discharge from a land application system must either meet the permitted activity criteria for animal effluent discharges within the Regional Water and Soil Plan for Northland, or have a specific resource consent for the discharge from the Regional Council.*

- 6 To minimise the exercise of this consent, the treatment ponds shall be at or near empty of wastewater prior to the beginning of winter so that the storage capacity of the ponds is maximised.

Advice Note: *The primary means of discharge is via a land application system which should be utilised as much as possible during dry periods so that the treatment ponds are at or near empty of wastewater prior to the beginning of winter.*

- 7 The treatment system shall be adequately maintained so that it operates effectively at all times. This maintenance shall include, but not be limited to, desludging of the system and maintenance of any pipe work as necessary. Any maintenance work which is necessary for the effective operation of the treatment system shall be done by the date stated by the Council in writing.
- 8 A stormwater diversion system shall be maintained and operated at the dairy shed and around the treatment ponds to prevent, as far as is practicable, stormwater entering the treatment system.
- 9 A flow control structure, such as a 'tee-piece' pipe or other baffle system, shall be maintained and operated on the outlet of the first treatment pond so as to minimise the movement of solids from the pond.
- 10 The treatment ponds shall be adequately fenced to prevent stock damaging the embankments and effluent pipes. In addition, machinery and vehicles shall also be operated in a manner that prevents such damage from occurring.
- 11 Notwithstanding any other conditions, the exercise of this consent shall not result in any of the following effects, either by themselves or in combination with other contaminants, on the water quality of the unnamed tributary of the Makaka Creek, as measured at or about the location co-ordinates 1679854 E 6011215 N (approximately 480 metres downstream from where the discharge enters the unnamed tributary):
 - (a) The production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - (b) Any conspicuous change in the colour or visual clarity;

The Consent Holder shall meet all reasonable costs of any such review.

Advice Note: *The Council may, in accordance with Section 128 of the Resource Management Act 1991, serve notice on the Consent Holder of its intention to review the conditions any time for the following purposes:*

- (a) *To provide for compliance with rules relating to minimum standards of water quality in any regional plan that has been made operative since the commencement of the consent; or*
- (b) *To provide for compliance with any relevant national environmental standards that have been made; or*
- (c) *Where there are inaccuracies in the information made available with the application that materially influenced the decision on the application and where the effects of the exercise of consent are such that it is necessary to apply more appropriate conditions.*

EXPIRY DATE: 30 JUNE 2029

Advice Note: *The Council, or a contractor representing the Council, may undertake monitoring of this resource consent at least annually to determine compliance with the conditions of consent.*

This consent is granted this Fourth day of October 2012 under delegated authority from the Council by:

S Savill
Consents Programme Manager - Water and Waste

Please note that the date of commencement for this resource consent is 4 October 2012.

- (c) Any emission of objectionable odour;
- (d) The rendering of freshwater unsuitable for consumption by farm animals;
- (e) The destruction of natural aquatic life by reason of a concentration of toxic substances;
- (f) Any significant increase to the *Escherichia coli* concentration;
- (g) The pH shall not fall outside the range of 6.0-9.0
- (h) The concentration of dissolved oxygen (daily minimum) shall not be reduced below 6 grams per cubic metre;
- (i) Based on no fewer than five samples collected over any 30-day period, the median concentration of faecal coliforms shall not exceed 600 per 100 millilitres, nor shall the 80 percentile value of the five samples exceed 2,400 per 100 millilitres. These analyses shall be undertaken using the membrane filter technique;
- (j) The four-day average concentration of total ammoniacal nitrogen $[(\text{NH}_3 + \text{NH}_4)\text{-N}]$ shall not exceed the following:

pH	Total Ammoniacal Nitrogen $[(\text{NH}_3 + \text{NH}_4)\text{-N}] \text{ g/m}^3$				
	10°C	15°C	20°C	25°C	30°C
6.50	1.81	1.81	1.22	0.86	0.60
6.75	1.81	1.81	1.22	0.86	0.60
7.00	1.81	1.81	1.22	0.86	0.61
7.25	1.81	1.81	1.23	0.86	0.61
7.50	1.81	1.81	1.23	0.86	0.61
7.75	1.73	1.64	1.15	0.81	0.58
8.00	1.13	1.09	0.76	0.54	0.39
8.25	0.64	0.62	0.44	0.32	0.23
8.50	0.37	0.36	0.26	0.19	0.14

For compliance purposes, the water quality at the downstream site shall be compared to the background water quality within the unnamed tributary of the Makaka Creek, as measured at a point approximately 20 metres upstream from where the discharge enters the unnamed tributary. In the event that the background water quality does not meet the standards specified in (g) – (j), then the discharge shall not result in an adverse change to those limits.

- 12 The Council may, in accordance with Section 128 of the Resource Management Act 1991, serve notice on the Consent Holder of its intention to review the conditions annually during the month of March for any one or more of the following purposes:

- (a) To deal with any adverse effects on the environment that may arise from the exercise of the consent and which it is appropriate to deal with at a later stage; or
- (b) To require the adoption of the best practicable option to remove or reduce any adverse effect on the environment.
