Subject: RE: SUB60315199- Remiger Road

Hi Hannah,

Now that they have proposed to move the accessway to a flood plains-free site west of the property, we won't be needing a flood risk assessment anymore and easements B, C & D are already existing to service the existing dwelling on lot 8.

Regards,
Ron

To: Hannah Thomson <hannah@planningplus.co.nz>
Subject: RE: SUB60315199- Remiger Road

Hi Hannah,

Yes the whole lower part of the accessway and the road will be flooded during a 100 year storm event. To comply, earthworks (fill) shall be carried out but will not involve much volume based on the flood prone area's 100 year level on the Geomaps, this however is indicative only and has to be determined by the applicant by way of a Flood Risk

Analysis. Despite the low earthworks volume, a separate resource consent will still be necessary however due to works being on the flood plains.

With regards to the access' flood risk, what I originally had in mind was that there are already 5 existing dwellings using this accessway and knowing that the proposed development through the Stormwater Neutrality Report will be mitigating the runoff from the impervious areas to pre-development stage or lesser made me think the risk is already existing but will not be aggravated by the future development.

Cheers,
Ron

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

Sorry for the delay in the response. I have talked to Ray Smith who has done a subdivision within the vicinity but on the opposite side (north) of Remiger Road about the flooding in the area. Even though 53B Remiger Road may be sited on a higher elevation still I would like to replace the previous construction of right of way condition and add in an ongoing condition just to be on the safe side. Please find below:

- (construction of right of way) The right of way over parts of proposed Lot 6 up to the intersection at Remiger Road shall be upgraded to a rural metalled standard to the Council's "Standards for Engineering Design and Construction". Sections with a grade greater than 1 in 8 shall be to a rural concrete standard. The upgrade shall ensure that the formed carriageway is no less than 3 metres in width. Further it shall include strategically placed passing bay/s for the purpose of servicing lots and make adequate provision for the drainage of surface water as well as provision of any ducts required for power and communications.

  Unless a site specific flooding assessment is provided, as much of the right of way as is reasonably practicable shall be located 500mm above the 1% AEP.
  Any sections of the right of way located below the 1% AEP + 500mm shall incorporate flood depth markers on each side of the access which are located at regular intervals in order to warn motorists and pedestrians of the possible flood depths across the access.

- (maintenance of access) Along with the local road network, the initial section of right of way over Lot 2 is expected to be subject to flooding that will periodically limit ingress and egress to Lots 1 - 6 during and after large rainfall events. The owners of Lots 1 - 6 shall maintain the access including the flood markers as and when required.

Hi Ronald,

I'm finalising this report and had a question for you on the access and flooding. As you know there are controls in the AUP about access in the flood plain, and also provisions in the RMA about access and natural hazards. Remiger Road and Ahuroa Road flood meaning that these new sites won't have access (and neither will those surrounding). Are you comfortable with the level of adverse effects in this regard? Do you know how long people would be either stuck on their sites for (or unable to get into their sites)- is this a satisfactory amount of time? Is the flood level too high for a vehicle to pass through?

Kind regards,

Hannah

Hi Hannah,

Thanks very much for getting these to us. We have now had a chance to run through the conditions with one of the applicants (Ray Nicklin) and overall we are agreeable, subject to the following amendments:

- Condition 1, please fix title of AEE to read 'Ray Nicklin' rather than 'Rick Nicklin'
- Condition 5i, please amend condition to provide for underground or above ground power connection
- Condition 5j, please amend condition to also provide for wireless phone connection
- Condition 6e, please fix to read 'Lot 1' as agreed, rather than 'Lot 2' (as otherwise Lot 2 is left with no access!)

I have not yet heard back from the other applicant (Desma Nicklin) but do not foresee any issues. If she gets in touch and any other changes are required I will let you know straight away, but otherwise could you please proceed on this basis.

Hi Myles/ Jess,

Please find attached draft conditions for the above application. These include:

- Staging condition,
- Ability to provide a fencing plan,
- Removal of condition about road/ ROW name,
- Landscape condition for ROW area as discussed with Myles yesterday (wording yet to be reviewed/ agreed),
- Landscape condition for Lots 1 and 2 as I'd been discussing with Myles- I think this captures all the changes we spoke about Myles but please let me know if otherwise.
- Restriction on Lot 1 access as discussed with Myles yesterday.

As per our conversation yesterday Myles, I haven't heard back yet from the DE about the road flooding issue so there may be some changes resulting from that.

Can you please confirm if you're agreeable to the attached conditions, in particular the landscaping related ones which I think are needed to address the character issues we spoke about. Please let me know if you'd like to discuss.

Kind regards,

Hannah

Hi Hannah,

Sorry for the delay in the response. I have talked to Ray Smith who has done a subdivision within the vicinity but on the opposite side (north) of Remiger Road about the flooding in the area. Even though 53B Remiger Road may be sited on a higher elevation still I would like to replace the previous construction of right of way condition and add in an ongoing condition just to be on the safe side. Please find below:

Attachments: Draft Conditions SUB60315119.pdf

Hi Myles/ Jess,

Please find attached draft conditions for the above application. These include:

- Staging condition,
- Ability to provide a fencing plan,
- Removal of condition about road/ ROW name,
- Landscape condition for ROW area as discussed with Myles yesterday (wording yet to be reviewed/ agreed),
- Landscape condition for Lots 1 and 2 as I'd been discussing with Myles- I think this captures all the changes we spoke about Myles but please let me know if otherwise.
- Restriction on Lot 1 access as discussed with Myles yesterday.

As per our conversation yesterday Myles, I haven't heard back yet from the DE about the road flooding issue so there may be some changes resulting from that.

Can you please confirm if you're agreeable to the attached conditions, in particular the landscaping related ones which I think are needed to address the character issues we spoke about. Please let me know if you'd like to discuss.

Kind regards,

Hannah

Thanks Hannah,

Yes they were after a condition allowing for staging if possible, however not sure on the order of titles to be created so would be as such that the amount of bush required to be protected would be covenanted for the amount of titles being created. The reason for providing staging is that some of the bush is already fenced so could create titles straight away, while one of the bush areas (Area CS) will be very difficult to fence so will require some forward planning. This is also the reason we have requested a condition providing for a fencing plan.

Hi Ronald,

I'm finalising this report and had a question for you on the access and flooding. As you know there are controls in the AUP about access in the flood plain, and also provisions in the RMA about access and natural hazards. Remiger Road and Ahuroa Road flood meaning that these new sites won't have access (and neither will those surrounding). Are you comfortable with the level of adverse effects in this regard? Do you know how long people would be either stuck on their sites for (or unable to get into their sites)- is this a satisfactory amount of time? Is the flood level too high for a vehicle to pass through?

Kind regards,

Hannah

Hi Hannah, looks OK except for the stock proof fencing. What if the approved plan is a just a few scattered trees in the garden? Each would then need to be individually fenced. Could it just say "A methodology to demonstrate how the planting will be physically protected". This will give a lot more flexibility.

Hi Myles,

Further to our phone conversation, I have reviewed the latest information Jess sent in regarding the riparian area on Lot 3. I'm conformable to include this in my report, and recommend that the area not be protected.

The landscaping condition suggested for proposed Lots 1 and 2 is as follows:

a. *At the time of making a building consent application, the owner of Lot 1 and Lot 2 shall submit for the certification of the Team Leader Northern Monitoring, a landscape planting and management plan (with supporting specifications).*

The landscape planting and management plan shall contain:

- *A plan of the planted area/s detailing the proposed plant species, plant sourcing, plant sizes at time of planting, plant locations, density of planting, and timing of planting.*

Hi Myles,

Further to our phone conversation, I have reviewed the latest information Jess sent in regarding the riparian area on Lot 3. I'm conformable to include this in my report, and recommend that the area not be protected.

The landscaping condition suggested for proposed Lots 1 and 2 is as follows:

a. *At the time of making a building consent application, the owner of Lot 1 and Lot 2 shall submit for the certification of the Team Leader Northern Monitoring, a landscape planting and management plan (with supporting specifications).*

The landscape planting and management plan shall contain:

- *A plan of the planted area/s detailing the proposed plant species, plant sourcing, plant sizes at time of planting, plant locations, density of planting, and timing of planting.*
- *A programme of establishment and post establishment protection and maintenance (fertilising, weed removal/spraying, replacement of dead/poorly performing plants, watering to maintain soil moisture, length of maintenance programme.*
- *Stockproof fencing to protect the planting.*

The purpose of the planting is to reduce the visibility of buildings and site access from public locations (in particular the road) and assist in reducing potential cumulative effects on rural character and amenity, and to assist in locating the buildings and driveways in a more vegetated landscape. This will require planting on the wider site not only in close proximity to the buildings themselves.

Once the landscape planting and management plan is certified, it shall be implemented in the following planting season. It shall be maintained and retained thereafter.

Are you comfortable to offer this? Please let me know if you'd like to discuss. In terms of progress, the rest of the report is already written.

Kind regards,

Hannah

Subject: [#CBC 40320] SUB60315119- 53b Remiger Road

Hi Jess,

After leaving you a message I thought I'd send a quick e-mail.

I've been looking into the issue of the riparian area on Lot 3, as the Council ecologist still thinks it should be protected. Given the state of change of the relevant provisions with the AUP appeals, I have also been in contact with Erik Oothuizen to discuss Councils current approach in relation to this issue. I've been advised that if an application relies on the legacy plan, such as this example, then Council are seeking protection of riparian areas under the RDP rules. Taking a strict review of rules and definitions in the RDP, I haven't seen anything that would exclude the watercourse on Lot 3 from complying with rule 7.14.2.5; are you aware of anything? I appreciate that implementation of the rule may not in the past have followed a strict reading, so happy to also consider any comments you may have in this regard.

The other issue is if the protection of the riparian area on Lot 3 is needed to manage some adverse effect created by this development. My understanding is that it isn't required to address an adverse effect of the development; I

Attention: Hannah Thomson

Email: hannah@planningplus.co.nz

Dear Hannah,

FURTHER RESPONSE TO SECTION 92 REQUEST
Client: Ray Nicklin and Desma Nicklin
Location: 53B Remiger Road, Puhoi
Council Ref: SUB60315119

Thank you for your email dated 7th September 2018 requesting further information pursuant to the original section 92 request to the above application. Our understanding is the only outstanding issue for this application is related to the overland flow paths within proposed Lot 3.

We have previously provided information in regards to this issue, most recently on 9th May 2018. This information provided an updated Scheme Plan to protect an additional overland flow path in Lot 5 of the subdivision, whilst leaving the areas in Lot 3 unprotected on the basis of them not meeting the intermittent watercourse definition under the Auckland Unitary Plan (Operative in Part) 2016 ("**AUP**"). Under the AUP, the definition of riparian margins only includes the margins of streams meeting the permanent or intermittent stream criteria outlined in the Plan. There are no equivalent definitions specifying stream status in relation to riparian margins in the legacy Auckland Council District Plan (Rodney Section) 2011 ("**Rodney Plan**"), however Rule 7.14.2.5 of the Rodney Plan requires protection of the riparian margins of all streams.

The Rodney Plan requires compliance with Rule 7.14.2.5 for all new sites created based on the protection of significant natural areas, as is proposed in this application. However, there is no equivalent rule in the AUP, which takes a broader approach to riparian protection with this being triggered in the case of watercourses that would be potentially affected by the proposed development. In the case of this application, it is not considered the watercourse in question will become degraded through the proposed application. The proposed building platform for Lot 3 is located outside of the 20m riparian yard and the development will result in hydrological neutrality as previously outlined in the resource consent application. The removal of the watercourse from the main farm activity will also result in an anticipated decrease in stock density on the surrounding land, which will assist in improving water quality when water is present.

To provide additional information on the nature of the watercourse within Lot 3, a site visit was undertaken by Cato Bolam in September 2018 during overcast weather, with no heavy rain in the last 48 hours. **Figure 1** shows the nature of the watercourse present. The watercourse has been assessed to be an ephemeral stream or wetland, as it does not meet at least three of the intermittent stream criteria in the AUP. Specifically, there are no natural pools, there was no surface water more than 48 hours after a rain event, there is rooted terrestrial vegetation established across the cross-sectional width of the channels, there is no organic debris on the floodplain, and there is no evidence of substrate sorting processes. **Figures 2-6** show these features further.

classification

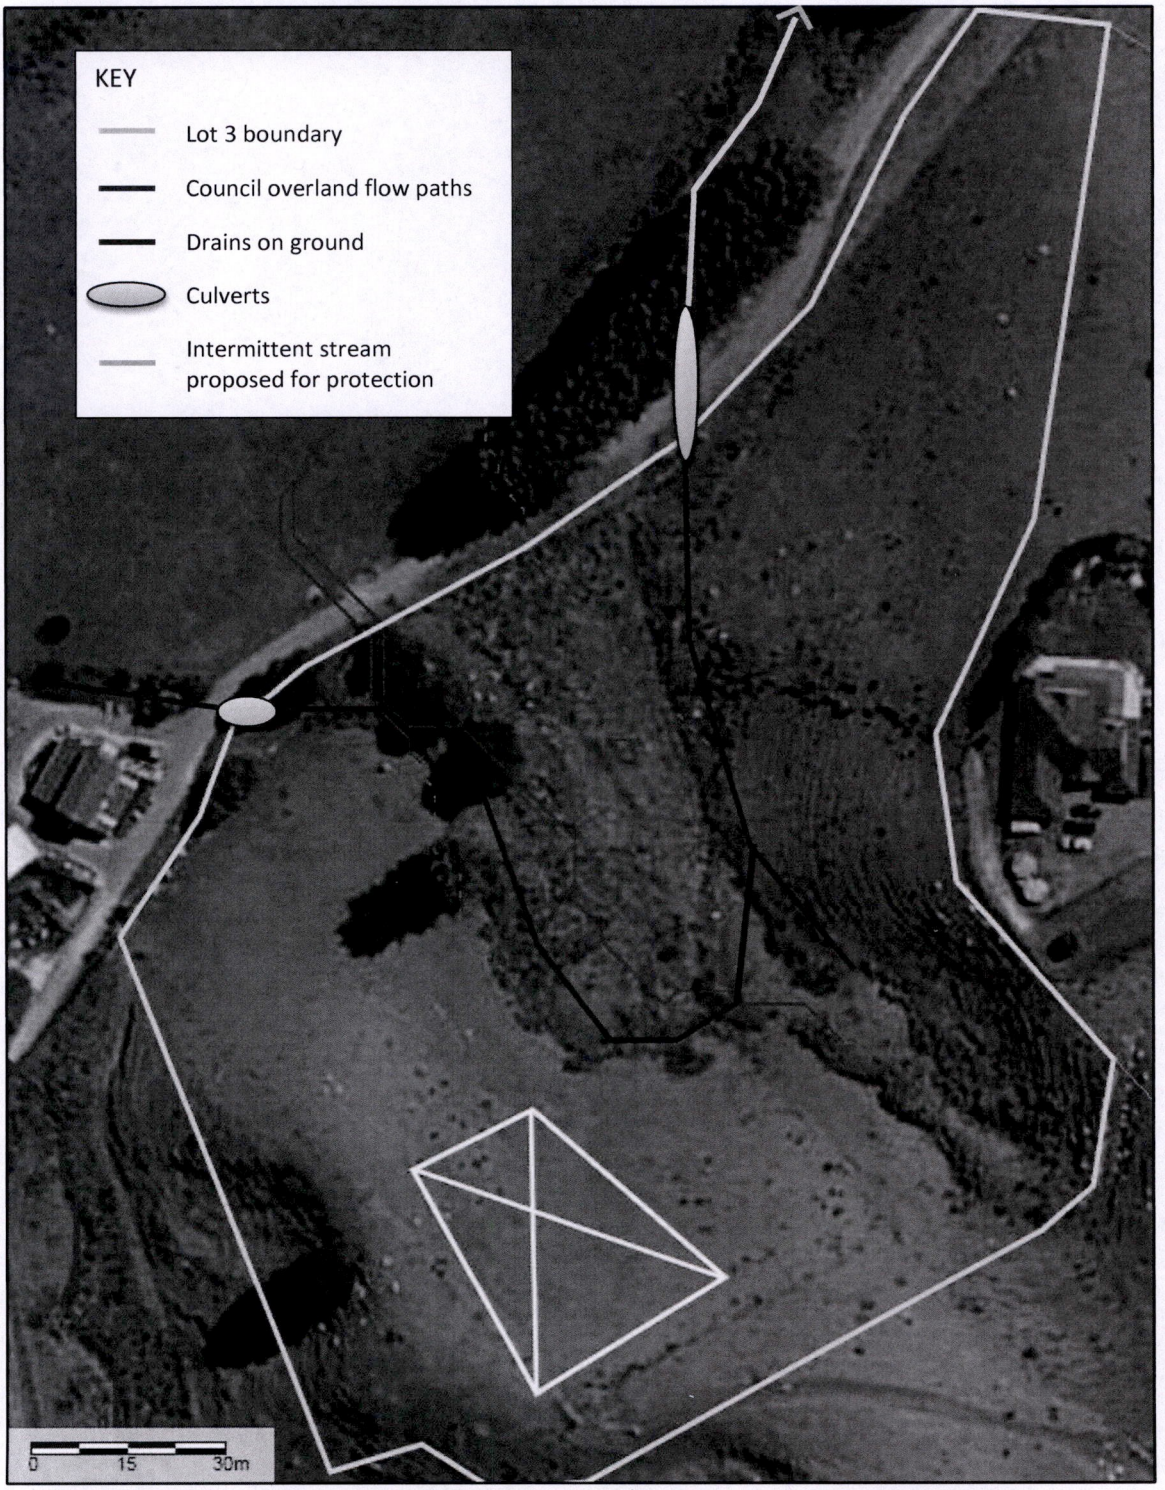

Figure 1: Diagram showing extent of modelled and actual watercourses within Lot 3 of subdivision

As shown in **Figure 1**, defined channels are present in parts of Lot 3, however these are not located in identified overland flow paths, and appear to have been dug to drain the surrounding wetland areas for more suitable farmland. The drains are also clearly visible on Google Earth aerial photos. These drains pass beneath the main farm access in locations where no overland flow paths are present, to join natural streams further north on the site.

dug to drain areas.

Figure 2: View east across eastern drain on site, showing surrounding wetland environment

Figure 3: Eastern drain, showing terrestrial vegetation across channel width and no surface water

Figure 4: Defined section of eastern drain showing no surface water or flood debris

Figure 5: Western drain showing only area of surface water where deer have pugged ground against fence line

Figure 6: Western dug drain immediately upstream of culvert beneath driveway

In summary, the watercourses present within Lot 3 are classified as ephemeral and have questionable naturalness given the straight nature and surrounding wet ground, as well as modified hydrology around the main farm access. In our experience, drains have not been classified as natural watercourses where

they are not located along indicative overland flow paths, and this interpretation is consistent with the artificial watercourse definition in the AUP. Rule 7.14.2.5 of the Rodney Plan does not appear to apply to farm drains, and wetlands are also not required to be protected under this rule. We therefore remain of the view that there is no provision in either the Rodney Plan or AUP to require protection of the Lot 3 watercourse.

We trust this information meets your requirements and respectfully request that you continue to process this application to its conclusion at your earliest possible convenience.

If you have any queries or require further information, please contact me by email at jessicar@catobolam.co.nz or telephone (09) 427 0072.

Yours faithfully
CATO BOLAM CONSULTANTS LTD

Hi Jess,

After leaving you a message I thought I'd send a quick e-mail.

I've been looking into the issue of the riparian area on Lot 3, as the Council ecologist still thinks it should be protected. Given the state of change of the relevant provisions with the AUP appeals, I have also been in contact with Erik Oothuizen to discuss Councils current approach in relation to this issue. I've been advised that if an application relies on the legacy plan, such as this example, then Council are seeking protection of riparian areas under the RDP rules. Making a strict review of rules and definitions in the RDP, I haven't seen anything that would exclude the watercourse on Lot 3 from complying with rule 7.14.2.5; are you aware of anything? I appreciate that implementation of the rule may not in the past have followed a strict reading, so happy to also consider any comments you may have in this regard.

The other issue is if the protection of the riparian area on Lot 3 is needed to manage some adverse effect created by this development. My understanding is that it isn't required to address an adverse effect of the development; I understand stormwater is addressed irrespective of this area being planted and that there are no other adverse effects created that would require mitigation via protection of this area on Lot 3. From an ecology perspective, is that your opinion also?

There is also a weighting issue that I will address in my report. I'm open to arguing against the area on Lot 3 being protected, but need to address the above issues as part of my reporting (as these seem to be Councils primary planning concerns with the riparian areas).

I'll also send you the landscaping condition that I spoke to Myles about, to make sure you're happy to offer it.

Kind regards,

Hannah

Hi Hannah,

Sorry I missed your phone call, I was out on a site visit – not trying to avoid you!! From an ecology perspective, yes it is my opinion that area would not require planting in terms of mitigating any effects of the subdivision. I have just had a chat to the client and he is adamant there isn't a stream in Lot 3, however it has been a while since I have been to site so I can't confirm this without going back to check. I have arranged to meet him on site on Monday so will get back to you early next week with further comment.

Appreciate the update.

Hi Myles,

I've spoken to Jess about this before also. I'm struggling to see any benefit in a separate access, and have concerns about potential character impacts. There doesn't seem to be any valid reason why access can't come off the ROW (I'm not sure how this could mean more ROW construction as you noted below? The ROW will directly pass this site and the DE has confirmed no more upgrading above that already required would be needed), and apart from he character issue there seems to be good natural hazard/ flooding reasons to limit the number of crossings.

Kind regards,

Hannah

To: Hannah Thomson <hannah@planningplus.co.nz>
Subject: FW: [#CBC 40320] SUB60315119- Remiger Road

Hi Hannah, I am just wondering about the access to Lot 2. It seems to make sense for this lot to access directly off the road rather than from the ROW, as it is a more practical access and requires less ROW construction. I do note that the access will be through a flood plain, but I also note that any time the private access is flooded, the road will also be flooded to an even greater extent, as the road is lower than the private drive. Therefore its really irrelevant if the private access floods a bit.

The alternative access via the ROW also floods, so having Lot 2 have to access via the ROW would not seem to improve access in any way as any time the private access floods, the ROW will also be flooded. Their levels are almost exactly the same. The flood prone area would in fact be a bit longer. Therefore whatever the access, when there is a major flood the occupiers cannot use Remiger Road. Therefore there is no advantage to the site from the ROW.

Given this, could it be agreed that Lot 2 can use a private access off Remiger Road.

HI Hannah,

Thanks for getting back to us. I have just had a meeting with the applicant regarding these further matters and respond as follows:

Point 1: Is there a reason Lots 1 and 2 can't use the proposed right of way? Wouldn't the access you refer to go through the floodplain?

Lots 1 and 2 could use the ROW, however this would bring the total users from 4 to 6, potentially adding the need to concrete the first section and widen to dual lane. This is not desirable from a construction/earthworks point of view and would also create more impermeable surfaces on the site, which could be avoided by the alternative we have proposed. However, we have reached a compromise which we are hoping will be acceptable. This would involve accessing Lot 1 from the ROW and accessing Lot 2 from the road.

The proposed access to Lot 1 is shown as ROW easement 'EE' on the updated Scheme Plan attached. This access will be achieved by turning off from the road crossing before the main ROW continues south to the other sites.

The proposed access to Lot 2 will be from its western road frontage. This will result in an additional road crossing, however from rural character point of view (which was the purpose of this query initially), the applicant believes this option is preferable than having more than 5 users on one ROW, as this will have additional impact on the users of the ROW themselves (with very few other users of this dead end road). The applicant also noted the proposed access point to Lot 2 is on a wide straight stretch of road and nestled behind the mature trees within Lot 2 so will be partially screened from users of the road.

In terms of the access being through a floodplain, we note this floodplain extends all the way east along Remiger Road to its intersection with Ahuroa Road, so would present the same issue even if the access was shifted to be through one of the ROWs (as you would still need to drive through the floodplain to get to your house – the same goes for all the existing lots in this location). For consenting purposes the applicant is agreeable to construct the

Ecology Report Scanned Separately

Hi Hannah,

As per your ecologists comments below (highlighted), the discernible defined channel of the watercourse is downstream of the driveway, which we have proposed for protection. There is only "evidence of historic channel morphology" in Lot 3. The drain present in Lot 3 is artificial indicated as per below plan which shows it is not located along the route of any natural flow paths. This drain passes through a culvert beneath the driveway and is diverted into the intermittent stream in Area 'CO'. Please also refer to the annotated watercourse plan sent on 9th May.

While we are finalising things for the consent, the applicant has also asked if it would be possible to stage the titles, with a provision in the consent that an appropriate area of bush is protected for the creation of each title (ie. 2ha for first title then 10ha for each additional title). The final stage would require all bush areas indicated on the approved Scheme Plan to be protected. Would this be okay and would you require any further information to include provision for this in the conditions?

Kind regards,

Jessica Reaburn MSc (Hons)

Hi Hannah,

Thanks for the update. As per my email and additional information provided re the watercourse on 9th May, we are not disagreeing with your ecologist's assessment regarding the intermittent nature of the watercourse and have agreed to plant and protect this watercourse to 10m width where it occurs – noting the location on the ground is different to the Council GIS as per the info we have already provided. Therefore I do not believe any further comment is required in response to Council's assessment below.

I have updated the riparian planting plan as per the suggested changes below, and also to cover the new planting area requested by Council's ecologist. This updated report is attached. The new planting area (Area 'CO') is shown on the Scheme Plan referenced as R5, previously sent to you on 9th May.

The new planting area (Area 'CO') is shown on the Scheme Plan referenced as R5, previously sent to you on 9th May.

Regarding the access, we reiterate the flood plain extends further east on Remiger Road and also covers the road access where the ROW crosses into the property. There will therefore be no difference in terms of potential flood issues whether the ROW is used or whether the property is accessed directly from the road. Myles will also contact you regarding this issue. If there is no resolution the applicant would like to meet the development engineer on site to discuss.

Hi Jess,

Hannah Thomson

From: Hannah Thomson
Sent: Wednesday, 11 July 2018 11:36 AM
To: 'Jessica Reaburn'
Subject: SUB6015199- 53 Remiger Road

Hi Jess,

As you know I have been looking into the watercourse and access issues.

In terms of access, while the change is better I am still concerned about either Lot 1 or Lot 2 having direct access onto Remiger Road. Apart from the character issues, the area is heavily affected by floodplains (which is an sisue we need to consider under s7(h) and s106 RMA) and on the face of it there doesn't appear to be any reason why the ROW (A etc) cannot be used. Council's Development Engineer has confirmed that no new conditions would be required if both lots used the ROW vs direct access onto the road.

In relation to the watercourse, I have now received the ecology memo which provides more detailed comments on this, and I have copied below comments from the Council's Ecologist. Do you have any further comments to make in this regard? Also with the new area added to Lot 5, I assume this is also to be planted and that this can occur in accordance with the planting plan submitted (or as amended)? The memo also includes comments on the planning plan, copied below. Are you comfortable to make these changes?

As per my previous e-mail, we have been working on the report and its completed apart from these final matters.

Kind regards,

Hannah

Ecologist comments on planting

The planting guidelines are appropriate for the site. The plant schedule is generally acceptable, although some changes are recommended. Firstly, rewarewa and pūriri are considered inappropriate for the site. Rewarewa does not grow well in wet situations and it is likely that pūriri will be damaged by frosts if planted in the open, as appears to be the case here. It is recommended that these species are substituted for 45 kahikatea. Secondly, the suggested plant grades for tōtara and kahikatea are too small and these should be increased to a minimum size of two litre grades. Thirdly, a note should be made that harakeke/flax should not be planted on the edge of the watercourses as it is susceptible to being dislodged during floods. The recommended plant spacings are appropriate for the site... The plant schedule should be updated as per the table below:

Species	Grade	Quantity	Note
Mānuka	0.5 litre	2,500	
Kānuka	0.5 litre	1,750	
Karamu		800	
Cabbage tree		800	
Harakeke/NZ flax		255	Should not be planted on the edge of the watercourse
Tōtara	2 litre	50	Should not be planted on the edge of the watercourse
Pūriri	n/a	0	Should not be planted due to susceptibility to frost
Rewarewa	n/a	0	Should not be planted in riparian areas due to intolerance of wet soils
Kahikatea	2 litre	45	Can be planted in very wet areas

Ecologist comments on watercourse

A small watercourse flows through proposed Lots 3, 4, and 5..... I queried the watercourse status in the S92 request. The applicant's response included a watercourse assessment under the AUP that concluded that the watercourse was ephemeral rather than intermittent. Auckland Council guidelines for the distinction between ephemeral and intermittent watercourses require that the watercourses are assessed against several criteria relating to channel morphology, hydrology, vegetation, and substrate. These aspects were covered in the applicant's S92 response and my assessment is outlined below.

Channel morphology

The applicant's assessment concluded that "the watercourse is more akin to a wetland environment as the wet area is spread over a much greater width than a simple stream channel". Whilst I agree that watercourse has wetland characteristics, I do not agree that this precludes it being classified as intermittent. The upper reach of the watercourse on proposed Lot 3 is severely degraded through cattle pugging and through a partially blocked culvert underneath a driveway, which in turn has resulted in an induced wetland habitat. Despite this, evidence of the historic channel morphology is still visible. Stock are able to access the watercourse downstream of the driveway where it flows through proposed Lots 4 and 5; however, the flow is not restricted here and the watercourse has a more discernible defined channel. The presence of a defined channel is a key indicator of an intermittent watercourse as per the criteria in the AUP.

Hydrology

My assessment took place during a period of heavy rain and it was therefore not possible to accurately assess the hydrology of the watercourse. The criterion to be met as outlined in the applicant's report was "it contains surface water more than 48 hours after a rain event which results in stream flow". The applicant's report states that surface water but no flow was present thus indicating the watercourse is ephemeral. A more detailed description of this criterion is provided in a draft working document prepared by Auckland Council entitled Guidance for the classification of drainage systems based on the Proposed Auckland Unitary Plan definition.

This document highlights the constraints associated in assessing a watercourse 48 hours after the previous rainfall event, including the fact that in order to fully satisfy the wording of the criterion the watercourse must be assessed at exactly 48 hours after the last rainfall event. Further conditions that must be satisfied whilst assessing this criterion including the amount of rainfall in the previous 24 hours (a minimum of 10 millimetres) and whether or not the rainfall event produced runoff resulting in stream flow are also discussed. The fact that it was raining during the assessment mean it was not possible to use this criterion during this assessment. The presence of natural pools is also considered an indicator of an intermittent rather than ephemeral watercourse; however, an assessment of this criterion is not included in the draft guidance document.

Vegetation

The presence or absence of rooted terrestrial vegetation indirectly indicates the length of time the watercourse channel contains water. This criterion can be challenging to assess because certain terrestrial plant species (particularly pasture species) can persist for prolonged periods in waterlogged or inundated conditions and also colonise rapidly as habitats dry out. For this reason terrestrial vegetation is likely to dominate intermittent watercourses during low-flow conditions through spring and summer. The presence of obligate or facultative wetland plant species1 is an indication that the watercourse is more likely to be intermittent than ephemeral.

The applicant's report states that terrestrial vegetation is not established across the entire cross-sectional width of the channel, which is a characteristic of intermittent watercourses. I agree with this assessment.

Substrate

Intermittent watercourses deposit organic debris on floodplains during flood events and substrates become sorted (different sized substrate particles become aggregated in relation to flow rates). The applicant's report states that there is no evidence of either process occurring. I did not make a full assessment of either process during my site visit as I considered the channel morphology and vegetation characteristics of the watercourse were sufficient to classify the watercourse as intermittent.

Summary

I consider the watercourse meets the criteria to be classified as intermittent. This means that riparian planting at a width of ten metres on each side of the watercourse is required along its entire length. In this respect, my conclusion differs from the one reached by the applicant's ecologist.

Hi Hannah,

The extra protection on Lot 5 is good and their annotated maps are useful for confirming that the intermittent watercourse isn't present on Lot 4. However; I still believe that the "seepage" on Lot 3 is an intermittent watercourse. My colleague who reviewed the report pointed out that the channel is clearly visible on the aerials which for him is a clear indication of an intermittent watercourse.

Cheers,

Jamie

Hi Jamie,

Does the attached and comments below impact on your thoughts on the watercourse issue? I have sent the comments in your memo to the applicant also.

Kind regards,

Hannah

The applicant has pointed out some discrepancies between the mapped Council overland flow paths (which are shown on the Scheme Plan) and the actual location of watercourses on the property, which I have summarised in the attached annotated plan. The main thing to note is the lack of any defined stream in this location in Lot 4, which can also be observed on aerial photos (which obviously pasture in like with the surrounding land). I have also attached an annotated photo of the point where the culvert comes into Lot 5 beneath the ROW from Lot 3.

I have not been out to site to reassess the stream, however based on the above information and my discussion with the applicant we will agree to include protection of the watercourse where it is clearly present, within Lot 5. This protection extends 10m north of the assumed original channel location and south to the boundary of Lot 5, as shown on the attached updated Scheme Plan.

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

I agree that the bush in the other non-SEA blocks is the same quality as the SEA bush; however, following the recent Environment Court hearing regarding the Unitary Plan I now have a better understanding of how the SEAs were selected. They weren't just selected on the quality (estimated in some cases since every patch of habitat wasn't visited), there was also an assessment made of how protecting the habitat patch would benefit the wider area. I wasn't at the hearing myself but I

did discuss this exact case with my colleague who did attend and in his view the reason the smaller blocks weren't included in the SEA overlay was that there was already enough of that particular vegetation type protected in the local area through the protection of larger blocks so there was no need to give them the added protection of an SEA designation. Does this fit with your understanding of how SEAs were selected?

Hi Jamie,

Hoping you can assist with a question on this application. As you will know the application doesn't include the protection of all the bush on the site and some of the bush being excluded is noted as SEA n the AUP(OP). The applicants ecologist has suggested that the bush proposed for protection is the same quality as the SEA bush, and that the bush should really have bene noted as SEA. Would you agree with this based on your observations on site?

Kind regards,

Hannah

To: Hannah Thomson <hannah@planningplus.co.nz>
Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

In my opinion the wetland character described in the S92 response is largely artificial and is the result of the culvert under the access track restricting water flow and damage to the banks of an

intermittent watercourse channel by stock. The intermittent stream channel is visible above and below the wetland area and I would be satisfied with a fence line that is set back from the estimated route of the original channel rather than the edge of the current wet area.

I believe that the watercourse meets Criteria a, b and d. I seem to remember seeing debris on the floodplain but my photos don't show that so I can't be sure. There was water flow through the channel during my visit; however, it took place during a period of heavy rain so I can't say for certain that the stream meets Criterion c. The stream will need to be re-assessed after a period of dry weather and I would suggest it is better to ask one of the stream people from Council (I have worked with Rue Statham and Carl Tutt in the past but I don't know if they work up in Puhoi) to do the assessment so we get a third opinion.

Many thanks,

Jamie

Hi Jamie,

Does the attached and comments below impact on your thoughts on the watercourse issue? I have sent the comments in your memo to the applicant also.

Kind regards,

Hannah

The applicant has pointed out some discrepancies between the mapped Council overland flow paths (which are shown on the Scheme Plan) and the actual location of watercourses on the property, which I have summarised in the attached annotated plan. The main thing to note is the lack of any defined stream in this location in Lot 4, which can also be observed on aerial photos (which obviously pasture in like with the surrounding land). I have also attached an annotated photo of the point where the culvert comes into Lot 5 beneath the ROW from Lot 3.

I have not been out to site to reassess the stream, however based on the above information and my discussion with the applicant we will agree to include protection of the watercourse where it is clearly present, within Lot 5. This protection extends 10m north of the assumed original channel location and south to the boundary of Lot 5, as shown on the attached updated Scheme Plan.

Hi Jamie,

Does the attached and comments below impact on your thoughts on the watercourse issue? I have sent the comments in your memo to the applicant also.

Kind regards,

Hannah

The applicant has pointed out some discrepancies between the mapped Council overland flow paths (which are shown on the Scheme Plan) and the actual location of watercourses on the property, which I have summarised in the attached annotated plan. The main thing to note is the lack of any defined stream in this location in Lot 4, which can also be observed on aerial photos (which obviously pasture in like with the surrounding land). I have also attached an annotated photo of the point where the culvert comes into Lot 5 beneath the ROW from Lot 3.

I have not been out to site to reassess the stream, however based on the above information and my discussion with the applicant we will agree to include protection of the watercourse where it is clearly present, within Lot 5. This protection extends 10m north of the assumed original channel location and south to the boundary of Lot 5, as shown on the attached updated Scheme Plan.

Hi Hannah,

The upgrade mentioned in the condition still holds true regardless of the addition of these 2 lots utilising this access. You're right, it would take 10 or more lots to trigger imposition of a 2 lane width access.

Regards,
Ronald

Subject: RE: SUB60315199- Remiger Road

Hi Ronald,

Question for you on access; if Lots 1 and 2 were to also get access from the right of way (vs directly onto Remiger Road), would this create any issues for you and would the ROW need to be formed to a different or higher standard? I would prefer that all the lots use the ROW vs having extra crossings onto Remiger Road (from a rural character/ amenity point of view) but want to check this doesn't create any issues for you and wouldn't result in large upgrading being required to the ROW. Is 10 sites the trigger for 2 lane width?

Kind regards,

Hannah

Hi Jess,

I've been in contact with the Council Ecologist who has said he also thinks that the bush proposed for protection is of a similar quality to the SEA areas on the site. I'll write my assessment on this basis. I'm looking into the other ecology matter, but we are also drafting the other sections of the reports in the interim as I know you're keen for a decision.

Kind regards,

Hannah

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

I agree that the bush in the other non-SEA blocks is the same quality as the SEA bush; however, following the recent Environment Court hearing regarding the Unitary Plan I now have a better understanding of how the SEAs were selected. They weren't just selected on the quality (estimated in some cases since every patch of habitat wasn't visited), there was also an assessment made of how protecting the habitat patch would benefit the wider area. I wasn't at the hearing myself but I did discuss this exact case with my colleague who did attend and in his view the reason the smaller blocks weren't included in the SEA overlay was that there was already enough of that particular vegetation type protected in the local area through the protection of larger blocks so there was no need to give them the added protection of an SEA designation. Does this fit with your understanding of how SEAs were selected?

Cheers,

Jamie

Hi Jamie,

Hoping you can assist with a question on this application. As you will know the application doesn't include the protection of all the bush on the site and some of the bush being excluded is noted as SEA n the AUP(OP). The applicants ecologist has suggested that the bush proposed for protection is the same quality as the SEA bush, and that the bush should really have bene noted as SEA. Would you agree with this based on your observations on site?

Kind regards,

Hannah

Hi Jess,

Quick update to let you know I met with Erik Oothuizen last week about the SEA issue and he has asked that I liaise with the Council ecologist about the SEA/ quality issue. I've asked some questions of them in this regard and will come back to you as soon as I have more information.

Kind regards,

Hannah

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

In my opinion the wetland character described in the S92 response is largely artificial and is the result of the culvert under the access track restricting water flow and damage to the banks of an intermittent watercourse channel by stock. The intermittent stream channel is visible above and below the wetland area and I would be satisfied with a fence line that is set back from the estimated route of the original channel rather than the edge of the current wet area.

I believe that the watercourse meets Criteria a, b and d. I seem to remember seeing debris on the floodplain but my photos don't show that so I can't be sure. There was water flow through the channel during my visit; however, it took place during a period of heavy rain so I can't say for certain that the stream meets Criterion c. The stream will need to be re-assessed after a period of dry weather and I would suggest it is better to ask one of the stream people

HI Hannah,

Thanks for getting back to us. I have just had a meeting with the applicant regarding these further matters and respond as follows:

Point 1: Is there a reason Lots 1 and 2 can't use the proposed right of way? Wouldn't the access you refer to go through the floodplain?

Lots 1 and 2 could use the ROW, however this would bring the total users from 4 to 6, potentially adding the need to concrete the first section and widen to dual lane. This is not desirable from a construction/earthworks point of view and would also create more impermeable surfaces on the site, which could be avoided by the alternative we have proposed. However, we have reached a compromise which we are hoping will be acceptable. This would involve accessing Lot 1 from the ROW and accessing Lot 2 from the road.

The proposed access to Lot 1 is shown as ROW easement 'EE' on the updated Scheme Plan attached. This access will be achieved by turning off from the road crossing before the main ROW continues south to the other sites.

The proposed access to Lot 2 will be from its western road frontage. This will result in an additional road crossing, however from rural character point of view (which was the purpose of this query initially), the applicant believes this option is preferable than having more than 5 users on one ROW, as this will have additional impact on the users of the ROW themselves (with very few other users of this dead end road). The applicant also noted the proposed access point to Lot 2 is on a wide straight stretch of road and nestled behind the mature trees within Lot 2 so will be partially screened from users of the road.

In terms of the access being through a floodplain, we note this floodplain extends all the way east along Remiger Road to its intersection with Ahuroa Road, so would present the same issue even if the access was shifted to be through one of the ROWs (as you would still need to drive through the floodplain to get to your house – the same goes for all the existing lots in this location). For consenting purposes the applicant is agreeable to construct the access from the road crossing through to the Lot 2 building platform as a condition of consent to ensure any purchaser of Lot 2 will have hazard free access. As earthworks in a floodplain would be an infringement of E12.6.2.11 we apply for an additional consent if necessary.

Point 2: I'm meeting with Council about this. To confirm, your view is that the bush areas proposed for protection would meet the SEA standard as per AUP(OP) criteria, and that the areas noted in the AUP(OP) are the same quality as the areas proposed for protection?

Correct this is our view. In addition, as stated in our response, in my opinion the quality of Area CV is higher than the quality of the largest SEA area (Area CU) as CV has been fenced from stock allowing considerable understorey regeneration, whereas CU currently still has stock roaming through.

Point 7: Additional intermittent watercourse protection.

The applicant has pointed out some discrepancies between the mapped Council overland flow paths (which are shown on the Scheme Plan) and the actual location of watercourses on the property, which I have summarised in the attached annotated plan. The main thing to note is the lack of any defined stream in this location in Lot 4, which

can also be observed on aerial photos (which obviously pasture in like with the surrounding land). I have also attached an annotated photo of the point where the culvert comes into Lot 5 beneath the ROW from Lot 3.

I have not been out to site to reassess the stream, however based on the above information and my discussion with the applicant we will agree to include protection of the watercourse where it is clearly present, within Lot 5. This protection extends 10m north of the assumed original channel location and south to the boundary of Lot 5, as shown on the attached updated Scheme Plan.

Hi Jessica,

Thanks for your further information response. I can comment on this as follows:

- Thank you for your responses on points 3-6 and 8 which are accepted.
- Point 1: Is there a reason Lots 1 and 2 can't use the proposed right of way? Wouldn't the access you refer to go through the floodplain?
- Point 2: I'm meeting with Council about this. To confirm, your view is that the bush areas proposed for protection would meet the SEA standard as per AUP(OP) criteria, and that the areas noted in the AUP(OP) are the same quality as the areas proposed for protection?
- Point 7: Council's consultant ecologist has provided the following:

  In my opinion the wetland character described in the S92 response is largely artificial and is the result of the culvert under the access track restricting water flow and damage to the banks of an intermittent watercourse channel by stock. The intermittent stream channel is visible above and below the wetland area and I would be satisfied with a fence line that is set back from the estimated route of the original channel rather than the edge of the current wet area.

  I believe that the watercourse meets Criteria a, b and d. I seem to remember seeing debris on the floodplain but my photos don't show that so I can't be sure. There was water flow through the channel during my visit; however, it took place during a period of heavy rain so I can't say for certain that the stream meets Criterion c. The stream will need to be re-assessed after a period of dry weather.

Culvert outlet
Lot 4
(no stream)

existing area proposed for protection
drain along ride drive adjoins stream to north
culvert
'Intermittent' stream (now proposed for protection)
culvert
seepage (not stream)

It has been suggested that we obtain a third opinion on this issue. Are you comfortable with this, or would you prefer to meet/ provide further information?

Kind regards,

Hannah

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Jess,

Those suggestions look fine. I understand the naming requirement relates to ROW's also where more than 5 sites are accessed.

Kind regards,

Hannah

Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Jess,

Please find below draft engineering conditions. Please let me know if you have any comments on these.

Kind regards,

Hannah

Engineering Conditions - To be completed before issue of the s.224(c) certificate

(construction of right of way) The right of way over parts of proposed Lot 6 up to the intersection at Remiger Road shall be upgraded to a rural metaled standard to the Council's "Standards for Engineering Design and Construction". Sections with a grade greater than 1 in 8 shall be to a rural concrete standard. The upgrade shall ensure that the formed carriageway is no less than 3 metres in width. Further it shall include strategically placed passing bay/s for the purpose of servicing lots and make adequate provision for the drainage of surface water as well as provision of any ducts required for power and communications.

(engineering plans) The engineering works required by this consent shall comply with the Council's "Standards for Engineering Design and Construction" as may be amended from time to time. Engineering Plans, as specified in the "Standards", shall be submitted to the Consents Engineer, and approval thereto received in writing, prior to the commencement of any works on the site.

Any variation or changes to the approved engineering plans shall be submitted for approval as an Amendment and approval received thereto prior to construction of the varied works.
The term 'engineering works' includes, but is not limited to:
1.1 Earthworks,
1.2 Any other works required by conditions of this consent.

Note: Structures such as retaining walls, in-ground walls and bridges will require a separate Building Consent.

Note: The plans required under this condition are separate to, and do not form part of, any Building Consent that may be required on the subject site.

(silt retention) Before commencement of any works, adequate silt retention structures as detailed in Technical Publication No. 90 "Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Auckland Region" shall be installed. These structures shall be maintained and cleaned out as necessary until such time as complete grass cover, or other non-erodible surface has been re-established over the area. The location and detail of the sediment control shall be included in the Engineering Plans for approval prior to commencement of construction.

(provide for electric power) Written confirmation shall be provided from the electricity network supplier responsible for the area, that provision of an electric supply has been made available by above ground or underground means to all saleable lots created and that all the network supplier's requirements for making such means of supply available have been met or satisfactory arrangements have been concluded with the Consent Holder to complete the provision of the supply. I don't think it's standard to require the electricity connection to be underground in the rural zone? Could we add in provision for above ground power supply? This is what is servicing the existing dwelling on Lot 6.

(provide for telecommunications) Written confirmation shall be provided from the telecommunications network supplier responsible for the area, that provision of telephone services has been made available by underground means to all saleable lots created and that all the network supplier's requirements for making such services available have been met or satisfactory arrangements have been concluded with the Consent Holder to complete the provision of the service. Can we add in provisions for proof of wireless telephone connection as an alternative to providing a phone line?

(new road name) The Consent Holder shall suggest to the Council a name for the new road shown on the Scheme Plan after consulting the local iwi for comment, together with clearance from Addresses@linz.govt.nz so that duplication of the name in any other part of the Auckland region is avoided. The Council Surveyor should be consulted in the first instance in regard to the appropriateness of the name and road type. When a name has been resolved with Local Board approval, the Consent Holder shall erect nameplates, in accordance with the Council's "Standards for Engineering Design and Construction". We are not creating a new road?!

Ongoing Conditions/Consent Notices

a) *(firefighting supply) Upon the construction of habitable buildings, sufficient water volume shall be provided in accordance with NZFS Fire Fighting Water Supplies CoP SNZ 4509:2008 and that this water supply be accessible for firefighting purposes. Should the water supply be provided by way of tank storage, this storage must be located a safe distance away from any habitable dwelling in accordance with the above CoP.*

b) *(building restrictions) Any buildings erected on the building sites identified on the plan shall be subject to the requirements of the report prepared by Engineering Geology Ltd., ref: 8447, dated 14 September 2017, and any subsequent reports. Copies of the said plan and report(s) will be held at the offices of the Council, Centreway Road, Orewa.*

c) *(building restrictions - stormwater control) All stormwater from buildings and paved areas on Lots 1-5 shall be collected and disposed of in accordance with the report prepared by the Stormwater Hydrology Report prepared by Cato Bolam Consultants, ref: 40320, dated 17 October 2017, unless otherwise approved by Council. The collection and disposal system shall be installed in conjunction with the erection of any buildings and shall thereafter be maintained to the specified capacity and standard in perpetuity.*

From: Jamie MacKay <Jamie.MacKay@wildlands.co.nz>
Sent: Monday, 26 March 2018 9:12 AM
To: Hannah Thomson
Subject: RE: [#CBC 40320] SUB60315199- Remiger Road

Hi Hannah,

In my opinion the wetland character described in the S92 response is largely artificial and is the result of the culvert under the access track restricting water flow and damage to the banks of an intermittent watercourse channel by stock. The intermittent stream channel is visible above and below the wetland area and I would be satisfied with a fence line that is set back from the estimated route of the original channel rather than the edge of the current wet area.

I believe that the watercourse meets Criteria a, b and d. I seem to remember seeing debris on the floodplain but my photos don't show that so I can't be sure. There was water flow through the channel during my visit; however, it took place during a period of heavy rain so I can't say for certain that the stream meets Criterion c. The stream will need to be re-assessed after a period of dry weather and I would suggest it is better to ask one of the stream people from Council (I have worked with Rue Statham and Carl Tutt in the past but I don't know if they work up in Puhoi) to do the assessment so we get a third opinion.

Many thanks,

Jamie

Our Ref: 40320

23 March 2018

Auckland Council
Northern Resource Consenting & Compliance
Private Bag 92300
AUCKLAND 1142

Attention: Hannah Thomson

Email: hannah@planningplus.co.nz

Dear Hannah,

RESPONSE TO SECTION 92 REQUEST
Client: Ray Nicklin and Desma Nicklin
Location: 53B Remiger Road, Puhoi
Council Ref: SUB60315119

Thank you for your letter dated 17th March requesting further information pursuant to section 92, to the above application.

We are happy to provide further information as requested and comment on your points raised as follows:

1. Proliferation of crossings can impact on rural character. Please advise if the applicant is willing to offer a consent notice condition that Lots 1 and 2 only obtain access via the proposed right of way easement.

At present neither of these lots is shown to be accessed from right of way easements. Instead we propose a joint access point straight onto Remiger Road in the northeast of Lot 1 and northwest of Lot 2. Please advise if this would be acceptable.

2. The AEE states that the application does not propose to protect all vegetation on the site, with an area in the north not proposed for protection. This appears to be SEA in the AUP(OP). Please provide assessment regarding why you consider it is appropriate to exclude areas identified as SEA, while areas not identified as SEA are proposed as protection.

As of the time of application, the weighting in terms of the bush protection subdivision proposal rests with the ACDP(OP), in which bush must be protected up to the next threshold for the number of titles being applied for (Rule 7.14.3.2.5(b)). Under the application of this rule, the quality of each respective area of bush, proposed or excluded from protection, is irrelevant providing all bush proposed for protection meets that Appendix 7B criteria. In terms of this application, there appears to be no dispute as to whether the non-SEA identified bush meets the Appendix 7B criteria, therefore the requirements of this specific rule are met.

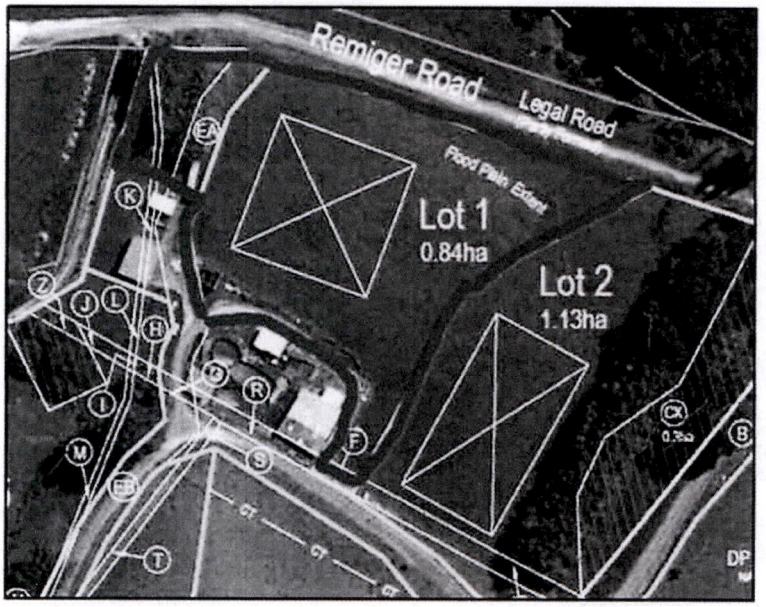

In terms of the AUP(OP), all indigenous bush would be required to be protected regardless of whether it is identified as SEA or not, however in this case we consider the non-SEA identified bush to be of SEA quality as outlined in the submitted Bush Quality Assessment Report. The main reason for this conclusion is that the non-SEA identified bush is almost identical in vegetation composition and quality

to the SEA bush, with Area CV in particular considered to be of higher quality than the SEA identified bush due to its existing stock exclusion. All bush areas also feature largely intact examples of threatened ecosystem types which in theory should allow them to meet SEA factor 2(a).

It is unclear why some of these patches of bush have been excluded from the SEA overlay, and without this information we can provide no further comment on the appropriateness of the exclusion, aside from in relation to the ACDP(OP) provisions as identified above.

3. The AEE includes comments on page 3 about reasons for the proposed size of Lot 1. Even taking this into account, it still appears that a complying lot size could be created. Please provide further reasoning for proposed site boundaries, the impacts on uses of the land and rural character associated with the smaller site size. If any alternatives were considered, please provide information on these.

An alternative was considered to include part of ROW 'EA' within Lot 1 to achieve a complying site size. In terms of leaving the existing farm ancillary buildings in the balance lot, this would have resulted in site boundaries roughly as below, with a total site area of approximately 1ha,

In terms of the boundaries shown, these would make no real difference on the ground as to the potential uses of Lot 1, as the western land would be cut off from the remainder of the lot by the ROW, and would only constitute approximately 840m^2 additional land outside of the ROW, with much of this being covered by vegetation. In terms of providing a logical lot layout, it makes more sense to retain this corner of the property in the balance, where the existing vegetation can provide amenity value to the ROW. It will also ensure the ROW is under continuous ownership, which will be a more effective arrangement for maintenance purposes.

ROW ownership.

In the opposite direction, there is potential to take some area out of Lot 2 and put this in Lot 1, however this would lead to additional issues in regards to achieving a 2,000m^2 building platform on Lot 2, outside of existing areas of vegetation and potential flood hazards, as well as achieving a complying boundary setback for the side yard.

In terms of rural character, as Lot 1 will be situated in a cluster of other rural residential lots, it is considered the size and shape of this lot will not be out of place in the surrounding environment, and will also have a large balance site (295ha) providing a backdrop to maintain rural amenity values.

4. Please confirm the composition of the vegetation to the west of Area CX and comment on any positive effects associated with incorporating this into Area CX.

The vegetation present here is a row of exotic trees including *Populus* and *Eucalyptus* species. Council's usual biosecurity requirements include the removal or control (e.g. via poisoning) of all exotic trees such as these from covenant areas. Therefore it is assumed that if they were to be included in the covenant, they would consequently require control, which would result in no vegetation left to include in the covenant.

It is recognised these mature trees offer a potentially very useful screen for the building platforms of Lots 1 and 2 when driving west along Remiger Road, and for this reason they have been left out of the covenant so they can be retained. It is noted this vegetation is outside of the 10m riparian margins of the stream, aside from where already indicated in the current proposal.

5. The AEE refers to HAIL in section 5.6 and cropping in particular. Please confirm that there is no evidence of other HAIL activities as identified in your investigations and discussions with the applicant (and please also advise how long the applicant has owned/had an interest in the land).

We confirm that, as stated in the AEE, there are no other HAIL risks associated with the areas where the new titles will be placed. This has been determined through site visits and discussions with one of the applicants (Ray Nicklin) who has, along with family members, managed this farm for several generations (at least 50 years).

It is noted a historic sheep shower is present on the property (HAIL category H), however in terms of the NES no action is required on this as the shower is located in the balance lot and therefore subject to the productive land exemption.

6. Two of the sites are shown on the Certificates of Title as being "Limited as to Parcels"; please advise what investigations have been undertaken to confirm that what is shown on the subdivision plan is accurate.

The two titles that are Limited as to Parcels are identified as NA2100/21 and NA137A/506. NA2100/21 will not change as a result of this application, as no new lots are being created within it, therefore no investigations have been undertaken. NA137A/506 however is the title in which the new lots are being created.

In order to ensure the parent boundaries in the areas where the new lots are being created are correct, the titles surrounding this area have been examined. These surrounding titles were all created recently, with the titles being issued on dates within the years 2000-2004. None of these titles are Limited as to Parcels, so we can be sure the boundaries between these are NA137A/506 are correct. The unconfirmed boundaries of NA137A/506 must therefore be in the west and south of this title, where no subdivision is taking place. The exact boundaries of this title will be confirmed via survey for issuance of the 223 certificate.

7. No fencing or riparian planting is proposed for a watercourse identified on the Auckland Council GIS system flowing through Lots 3, 4 and 5. This watercourse is degraded; however, it has a defined channel and meets the criteria to be determined as intermittent. Please provide an updated scheme plan showing fencing and riparian planting around this watercourse or provide further assessment why it is appropriate that this not be required.

Could you please provide your assessment against the intermittent stream criteria as we consider the stream ephemeral. Our assessment based on the intermittent criteria is provided below.

> *(a) it has natural pools;* **Criterion met (only at downstream end)**
> *(b) it has a well-defined channel, such that the bed and banks can be distinguished;* **Criterion met in places, but not consistently**

(c) it contains surface water more than 48 hours after a rain event which results in stream flow; **Criterion not met (surface water but no stream flow)**
(d) rooted terrestrial vegetation is not established across the entire cross-sectional width of the channel; **Criterion met**
(e) organic debris resulting from flood can be seen on the floodplain; or **Criterion not met**
(f) there is evidence of substrate sorting process, including scour and deposition. **Criterion not met**

In our view the watercourse is more akin to a wetland environment as the wet area is spread over a much greater width than a simple stream channel. At the downstream end (northern part of Lot 5), the channel becomes much more defined among the willow trees, hence why this end of the watercourse is shown for riparian protection.

8. Please confirm the width of the length of the existing accessway proposed to become a right of way.

The existing accessway is, on average, 4m wide, with width varying between 3.5m to 4.8m along the length. The new ROW (EA, EB, ED) will serve four titles (Lots 3-6), therefore a single lane is considered adequate. Passing bays will be installed at least every 100m, with the intent that a finalised ROW design will be approved as a condition of consent prior to construction.

We trust this information meets your requirements and respectfully request that you continue to process this application to its conclusion at your earliest possible convenience.

If you have any queries or require further information, please contact me by email at jessicar@catobolam.co.nz or telephone (09) 4270072.

PS- Feedback, FYI, on weed and pest plan from biodiversity team:

I have reviewed the pest plan and it is fine, the only comment I have is they are imposing the same baiting density for Possum as they have for Rodent, 50 by 100 meters, that is fine but possum council are happy with 1 per hectare not two for possum and this may save the client on stations and poison over time.

Dear Jessica

Re: Resource Consent Application- 53B Remiger Road, Puhoi

I have undertaken a planning review of the above application and obtained advice from Council specialists. Under section 92 of the Resource Management Act 1991 (RMA), I request the following further information to enable an appropriate understanding of the proposal and assessment of its effects:

1. Proliferation of crossings can impact on rural character. Please advise if the applicant is willing to offer a consent notice condition that Lots 1 and 2 only obtain access via the proposed right of way easement.
2. The AEE states that the application does not propose to protect all vegetation on the site, with an area in the north not proposed for protection. This appears to be SEA in the AUP(OP). Please provide assessment regarding why you consider it is appropriate to exclude areas identified as SEA, while areas not identified as SEA are proposed for protection.
3. The AEE includes comments on page 3 about reasons for the proposed size of Lot 1. Even taking this into account, it still appears that a complying site size could be created. Please provide further information on the reasoning for proposed site boundaries, the impacts on uses of the land and rural character associated with the smaller site size. If any alternatives were considered, please provide information on these.
4. Please confirm the composition of the vegetation to the west of Area CX and comment on any positive effects associated with incorporating this into Area CX.
5. The AEE refers to HAIL in section 5.6 and cropping in particular. Please confirm that there is no evidence of other HAIL activities as identified in your investigations and discussions with the applicant (and please also advise how long the applicant has owned/ had an interest in the land).
6. Two of the sites are shown on the Certificates of Title as being "Limited as to Parcels"; please advise what investigations have been undertaken to confirm that what is shown on the subdivision plan is accurate.
7. No fencing or riparian planting is proposed for a watercourse identified on the Auckland Council GIS system flowing through Lots 3, 4 and 5. This watercourse is degraded; however, it has a defined channel and meets the criteria to be determined as Intermittent. Please provide an updated scheme plan showing fencing and riparian planting around this watercourse or provide further assessment why it is appropriate that this not be required.

8. Please confirm the width of the length of the existing accessway proposed to become a right of way.

You must provide this information within 15 working days. If you are unable to provide the information within 15 working days, then please contact the reporting planner named below so that an alternative timeframe can be mutually agreed.

If you do not respond within 15 working days, refuse to provide the information or do not meet an agreed alternative timeframe between Council and yourself, a decision on the application must be made as required by section 92A(3) of the Resource Management Act 1991. Under section 104(6) the council may decline an application for resource consent where there is insufficient information.

Under section 88C of the RMA, the processing of your application is suspended until the above matter(s) has/have been addressed, or the 15 working day time limit has expired.

If you have any queries regarding this letter, please feel free to either call me on 09 427 9966, 021 261 9966 or email me at hannah@planningplus.co.nz.

Yours sincerely

HThomson

* Copy to Assessments

Hi Hannah,

I visited the site yesterday and had a good look round. It is a bit of a complicated one in terms of the different plans – I note that throughout all the Cato reports they constantly refer to the "still operative" Rodney plan but in our recent experience with another site (where the consent application was originally submitted long before the new rules came in) that isn't true. My first thoughts on the assessment under the two plans:

Rodney plan

- The bush blocks all qualify so no problems there
- There is an intermittent to permanent watercourse that starts in Lot 3 and flows through Lots 4 and 5. The very bottom reach of this watercourse is proposed for planting (area Z on the scheme plan) but the rest isn't and it should be. To phrase this as an S92 request:
    - No fencing and riparian planting is proposed for a watercourse identified on the Auckland Council GIS system flowing through Lots 3, 4 and 5. This watercourse is degraded; however, it has a defined channel and meets the criteria to be determined as Intermittent under the AUP. Please provide an updated scheme plan showing fencing and riparian planting around this watercourse.

AUP

- Proposed covenant CU, CP, CO and CR are within the SEA overlay so protection of these area with a 20 metre buffer qualifies for subdivision
- Proposed covenants CT, CS, CV and CW are not SEA so protection of these areas does not qualify for subdivision. All of these should be SEA
- A block of SEA vegetation at the northern section of the site does qualify for subdivision but that isn't going to be protected under this proposal.

In this case I think assessing the application under the Rodney plan will create a better ecological outcome because a larger area of indigenous forest will be protected. I expect that Cato are going to have some sort of argument against protecting the unprotected watercourse but that could be used as a negotiating tool to get the application assessed under Rodney rather than AUP but I don't know if it works like that. Another option could be to get the better quality patches of bush classed as SEA but I don't think this an option anymore. I would support a compromise where these blocks are assumed to be SEA and protected with a 20 metre buffer if that gets the applicant the outcome he wants but if we push through AUP rules he might walk away from the non-SEA blocks of bush. This may result in the other SEA bush being protected but then the smaller patches won't be.

So...a bit of a tricky one. It would be good to have a chat with you about it before I put too much time into the report. I am in the office all day if you are free for a call.

Cheers,

Jamie

Hi Jamie,

No, nothing specific rule- wise in the AUP (which seems an odd oversight). I did receive a legal opinion about the applicability of the Rodney rules the other day but haven't read it yet. If you could refer to any areas in your report and how important you think it is to protect them, I can see how fare we get with the applicant.

Kind regards,

Hannah

Hi Hannah,

Quick planning question before I go out on site. Simon Mills pointed out a couple of potential watercourses that haven't been shown as being planted on the scheme plan. Is riparian planting only required under the Rodney Plan or is there something in the Unitary Plan that requires it? I haven't been able to find anything but that doesn't mean it isn't there.

Cheers,

Jamie

Subject: RE: [#CBC 40320] SUB60315119- 53a Remiger Road

Hi Hannah,

Yes we agree we should be ok with weighting, provided the consent is issued prior to decision on the hearings. So hopefully no major delays – please let me know as soon as possible if further information is required.

Kind regards,

Jessica Reaburn MSc (Hons)

Thanks. I'll keep you posted as things progress. I would have thought you'd be ok plan weighting wise until the decision on the appeals came out- is that consistent with your view?

Have a good weekend too ☺

Kind regards,

Hannah

Subject: RE: Weekly lodged applications report for week ending 16 February 2018

Hi Hannah,

Thanks for your e-mail.

I'd suggest that you do share the information with them. Technically, once an application has been lodged anyone can request to view the details so I've no issue with them seeing the details. I am not too sure what their special interest is in the area – I am guessing maybe around heritage (possibly?)

In the event that you receive any comments from the group I'd suggest that you deal with them as you would do any comments that you may receive from neighbours.

[redacted]ny further queries please do not hesitate to contact me.

This Report is sorted by Local Board (Column A). Legacy Council has been moved to column J after the description. A filter function is available along the column headers to further refine the information you are looking for.

We are still working on the report writer template and there may be changes as we refine the process. There may also be delays in the report processing through our Business Intelligence Unit.

If you require any further information on the applications in this week's report please email us at Application_Request@aucklandcouncil.govt.nz by **23 February 2018** , this will ensure your request is forwarded to the appropriate planner within timeframes.

Subject: RE: [#CBC 40320] SUB60315119- 53a Remiger Road

Hi Hannah,

Thanks very much for your message. The main time frame we were trying to work to is the rural appeals, which start on 19th March, however there were some delays prior to application so I understand time is running out. As you will see some of the stands of bush are not SEA and are smaller than 5ha. Consent has been applied for as a non-complying activity under the AUP in this regard, however my bush assessment outlines these areas are of SEA standard. So potentially not too much of an issue (depending on Council's ecological review) as the application is non-complying for exceeding number of in situ lots anyway.

As always we will appreciate processing as fast as you are able given wait times for specialists.

Have a good weekend ☺

Cheers,
Jess

Hi Jessica,

Auckland Council have asked us to process the above application; unfortunately we've only just received it and I see you lodged it a few weeks ago. Please let me know if your clients have any specific timeframes they're working to, as there are likely to be some delays in getting specialist feedback. Apologies for this. The applications been accepted for processing under s88, and relevant specialist input is being sought. Once this has been received, I'll contact you if we require any further information. Please let me know if you have any queries in the interim.

Hannah,

Hi, I have reviewed the pest plan and it is fine, the only comment I have is they are imposing the same baiting density for Possum as they have for Rodent, 50 by 100 meters, that is fine but possum council are happy with 1 per hectare not two for possum and this may save the client on stations and poison over time.
